The following disclosure is added under the "MAIN RISKS" section of the summary prospectuses and within the summary section and the "FUND DETAILS" section of each fund's prospectus:

Market disruption risk. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Market disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Recent market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, and the significant uncertainty, market volatility, decreased economic and other activity and increased government activity that it has caused. Specifically, COVID-19 has led to significant death and morbidity, and concerns about its further spread have resulted in the closing of schools and non-essential businesses, cancellations, shelter-in-place orders, lower consumer spending in certain sectors, social distancing, bans on large social gatherings and travel, quarantines, government economic stimulus measures, reduced productivity, rapid increases in unemployment, increased demand for and strain on government and medical resources, border closings and global trade and supply chain interruptions, among others. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve. The pandemic may affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability of an economic recession or depression. The fund and its investments may be adversely affected by the effects of the COVID-19 pandemic, and a prolonged pandemic may result in the fund and its service providers experiencing operational difficulties in coordinating a remote workforce and implementing their business continuity plans, among others.

For Xtrackers Harvest CSI 300 China A-Shares ETF, Xtrackers MSCI China A Inclusion Equity ETF, Xtrackers Harvest CSI 500 China A-Shares Small Cap ETF and Xtrackers MSCI All China Equity ETF, the following disclosure is added to "Special Risk Considerations of Investing in China" under the "MAIN RISKS" section of the summary prospectus and within the summary section of the fund's prospectus, and added to "MAIN RISKS – Risk of Investing in China – Political and economic risk" in the "FUND DETAILS" section of the fund's prospectus:

From time to time, and as recently as early 2020 with the coronavirus known as COVID-19, China has experienced outbreaks of infectious illnesses, and the country may be subject to other infectious illnesses, diseases or other public health emergencies in the future. Any public health emergency could reduce consumer demand or economic output, result in market closures, travel restrictions or quarantines, and generally have a significant impact on the Chinese economy, which in turn could adversely affect the fund's investments.

The following replaces "Operational risk" in the "MAIN RISKS" section of each fund's summary prospectus and within the summary section of each fund's prospectus:

Operational risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

The following replaces "Operational risk" in the "MAIN RISKS" section of the "FUND DETAILS" section of each fund's prospectus:

Operational risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

Cyber-attacks may include unauthorized attempts by third parties to improperly access, modify, disrupt the operations of, or prevent access to the systems of the fund's service providers or counterparties, issuers of securities held by the fund or other market participants or data within them. In addition, power or communications outages, acts of god, information technology equipment malfunctions, operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data.

Cyber-attacks, disruptions, or failures may adversely affect the fund and its shareholders or cause reputational damage and subject the fund to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. In addition, cyber-attacks, disruptions, or failures involving a fund counterparty could affect such counterparty's ability to meet its obligations to the fund, which may result in losses to the fund and its shareholders. Similar types of operational and technology risks are also present for issuers of securities held by the fund, which could have material adverse consequences for such issuers, and may cause the fund's investments to lose value. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

For example, the fund relies on various sources to calculate its NAV. Therefore, the fund is subject to certain operational risks associated with reliance on third party service providers and data sources. NAV calculation may be impacted by operational risks arising from factors such as failures in systems and technology. Such failures may result in delays in the calculation of the fund's NAV and/or the inability to calculate NAV over extended time periods. The fund may be unable to recover any losses associated with such failures.

YOUR INVESTMENT IN A FUND IS NOT A BANK DEPOSIT AND IS NOT INSURED OR GUARANTEED BY THE FEDERAL DEPOSIT INSURANCE CORPORATION OR ANY OTHER GOVERNMENT AGENCY, ENTITY OR PERSON.

Xtrackers MSCI Emerging Markets ESG Leaders Equity ETF

Ticker: EMSG

Stock Exchange: NYSE Arca, Inc.

INVESTMENT OBJECTIVE

Xtrackers MSCI Emerging Markets ESG Leaders Equity ETF (the "fund"), seeks investment results that correspond generally to the performance, before fees and expenses, of the MSCI Emerging Markets ESG Leaders Index (the "Underlying Index").

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy and hold shares. You may also pay brokerage commissions on the purchase and sale of shares of the fund, which are not reflected in the table.

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.20
Other Expenses	None
Total annual fund operating expenses	0.20

EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of shares of the fund. It also does not include the transaction fees on purchases and redemptions of Creation Units (defined herein), because those fees will not be imposed on retail investors. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$20	\$64	\$113	\$255

PORTFOLIO TURNOVER

The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover may indicate higher transaction costs and may mean higher taxes if you are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example, and can affect the fund's performance.

Portfolio turnover rate for the fund, for the period from December 6, 2018 (commencement of operations) through the most recent fiscal year, was 16%.

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a "passive" or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is a capitalization weighted index that provides exposure to companies with high environmental, social and governance ("ESG") performance relative to their sector peers. The Underlying Index consists of large- and medium-capitalization companies across emerging markets countries. Emerging markets countries are countries that major international financial institutions, such as the World Bank, generally consider to be less economically mature than developed nations. Emerging markets countries can include every nation in the world except the United States, Canada, Japan, Australia, New Zealand and countries located in Western Europe. The annual review of the Underlying Index takes place in May and it is rebalanced in August, November and February; the fund updates and rebalances its portfolio in a corresponding fashion.

The Underlying Index uses MSCI ESG Ratings, MSCI ESG Controversies and MSCI Business Involvement Screening Research (collectively, "MSCI ESG Research") to determine index components for the Underlying Index.

■ MSCI ESG Ratings provides research, analysis and ratings of how well companies manage their ESG risks and opportunities. MSCI ESG Ratings provides a company with an overall ESG rating on a seven point scale, ranging from 'AAA' to 'CCC.' Existing constituents of the Underlying Index are required to have an MSCI ESG rating of BB or above to remain in the index, and companies that are currently not constituents of the Underlying Index are also required to have an MSCI ESG rating of BB or above to be considered eligible for addition.

■ MSCI ESG Controversies provides assessments of controversies concerning the negative ESG impact of company operations, products and services. MSCI ESG Controversies score companies on a scale of 0 to 10, with 0 being the most severe controversy. Existing constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 1 or above to remain in the index, while companies that are currently not constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 3 or above to be considered eligible for addition.

■ MSCI ESG Business Involvement Screening Research aims to enable institutional investors to manage ESG standards and restrictions reliably and efficiently. Companies that are involved in specific business activities which have high potential for negative social and/or environmental impact, such as alcohol, gambling, tobacco, nuclear power, conventional weapons, nuclear weapons, controversial weapons and civilian firearms, are ineligible for inclusion.

The fund uses a full replication indexing strategy to seek to track the Underlying Index. As such, the fund invests directly in the component securities (or a substantial number of the component securities) of the Underlying Index in substantially the same weightings in which they are represented in the Underlying Index. If it is not possible for the fund to acquire component securities due to limited availability or regulatory restrictions, the fund may use a representative sampling indexing strategy to seek to track the Underlying Index instead of a full replication indexing strategy. "Representative sampling" is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield), and liquidity measures similar to those of the Underlying Index. The fund may or may not hold all of the securities in the Underlying Index when using a representative sampling indexing strategy. The fund will invest at least 80% of its total assets (but typically far more) in component securities (including depositary receipts in respect of such securities) of the Underlying Index.

As of October 31, 2019, the Underlying Index consisted of 436 securities, with an average market capitalization of approximately \$6.5 billion and a minimum market capitalization of approximately \$79 million, from issuers in the following countries: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Qatar, Russia, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey and the United Arab Emirates. The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in equity securities of issuers from emerging markets countries. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of securities of issuers from China (29.1%) and Taiwan (16.9%).

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of issuers in the financial services (25.6%), consumer discretionary (16.5%), and information technology (15.1%) sectors. The financial services sector includes companies involved in banking, consumer finance, asset management and custody banks, as well as investment banking and brokerage and insurance. The consumer discretionary goods sector includes durable goods, apparel, entertainment and leisure, and automobiles. The information technology sector includes companies engaged in developing software and providing data processing and outsourced services, along with manufacturing and distributing communications equipment, computers and other electronic equipment and instruments. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

While the fund is currently classified as "non-diversified" under the Investment Company Act of 1940, it may operate as or become classified as "diversified" over time. The fund could again become non-diversified solely as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track. Shareholder approval will not be sought when the fund crosses from diversified to non-diversified status under such circumstances.

The fund or securities referred to herein are not sponsored, endorsed, issued, sold or promoted by MSCI, and MSCI bears no liability with respect to any the fund or securities or any index on which the fund or securities are based. The Prospectus contains a more detailed description of the limited relationship MSCI has with DBX Advisors LLC and any related funds.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the

fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as numerous other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About Fund Strategies, Underlying Index Information and Risks" and in the Statement of Additional Information ("SAI").

ESG investment strategy risk. The Underlying Index's ESG methodology, and thus the fund's investment strategy, limits the types and number of investment opportunities available to the fund and, as a result, the fund may underperform other funds that do not have an ESG focus. The Underlying Index's ESG methodology may result in the fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the index provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

Stock market risk. When stock prices fall, you should expect the value of your investment to fall as well. Stock prices can be hurt by poor management on the part of the stock's issuer, shrinking product demand and other business risks. These may affect single companies as well as groups of companies. The market as a whole may not favor the types of investments the fund makes, which could adversely affect a stock's price, regardless of how well the company performs, or the fund's ability to sell a stock at an attractive price. There is a chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising and falling prices. Events in the US and global financial markets, including actions taken by the US Federal Reserve or foreign central banks to stimulate or stabilize economic growth, may at times result in unusually high market volatility which could negatively affect performance. Further, geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes and related geopolitical events have led, and in the future may lead, to increased short-term market volatility, which may disrupt securities markets and have adverse long-term effects on US and world economies and markets. To the extent that the fund invests in a particular geographic region, capitalization or sector, the fund's performance may be affected by the general performance of that region, capitalization or sector.

Emerging market securities risk. The securities of issuers located in emerging markets tend to be more volatile and less liquid than securities of issuers located in more mature economies, and emerging markets generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. The securities of issuers located or doing substantial business in emerging markets are often subject to rapid and large changes in price.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund's investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets. To the extent that the fund invests in non-US dollar denominated foreign securities, changes in currency exchange rates may affect the US dollar value of foreign securities or the income or gain received on these securities.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments.

Depository receipt risk. Depository receipts involve similar risks to those associated with investments in securities of non-US issuers. Depository receipts also may be less liquid than the underlying shares in their primary trading market.

Currency risk. Changes in currency exchange rates and the relative value of non-US currencies may affect the value of the fund's investment and the value of your fund shares. Because the fund's NAV is determined on the basis of the US dollar, investors may lose money if the foreign currency depreciates against the US dollar, even if the foreign currency value of the fund's holdings in that market increases. Conversely, the dollar value of your investment in the fund may go up if the value of the foreign currency appreciates against the US dollar. The

value of the US dollar measured against other currencies is influenced by a variety of factors. These factors include: interest rates, national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates. Currency exchange rates can be very volatile and can change quickly and unpredictably. Therefore, the value of an investment in the fund may also go up or down quickly and unpredictably and investors may lose money.

Medium-sized company risk. Medium-sized company stocks tend to be more volatile than large company stocks. Because stock analysts are less likely to follow medium-sized companies, less information about them is available to investors. Industry-wide reversals may have a greater impact on medium-sized companies, since they lack the financial resources of larger companies. Medium-sized company stocks are typically less liquid than large company stocks.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in circumstances where redemptions from the fund may be higher than normal.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Financial services sector risk. To the extent that the fund invests significantly in the financial services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the financial services sector. The financial

services sector is subject to extensive government regulation, can be subject to relatively rapid change due to increasingly blurred distinctions between service segments, and can be significantly affected by availability and cost of capital funds, changes in interest rates, the rate of corporate and consumer debt defaults, and price competition. In addition, the deterioration of the credit markets in 2007 and the ensuing financial crisis in 2008 resulted in an unusually high degree of volatility in the financial markets for an extended period of time, the effects of which may persist indefinitely.

Consumer discretionary sector risk. To the extent that the fund invests significantly in the consumer discretionary sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Information technology sector risk. To the extent that the fund invests significantly in the information technology sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the information technology sector. Information technology companies are particularly vulnerable to government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Information technology companies also face competition for services of qualified personnel. Additionally, the products of information technology companies may face obsolescence due to rapid technological development and frequent new product introduction by competitors. Finally, information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Indexing risk. While the exposure of an index to its component securities is by definition 100%, the fund's effective exposure to index securities may vary over time. Because an index fund is designed to maintain a high level of exposure to its Underlying Index at all times, it will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Tracking error risk. The performance of the fund may diverge from that of its Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes

in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. In addition, to the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index) it may cause the fund to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to legal restrictions or limitations imposed by the governments of certain countries, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other regulatory reasons. To the extent the fund calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units (defined below), the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in fund shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the

creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by the fund may be traded in markets that close at a different time than the exchange on which the fund's shares trade. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when the exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund.

Valuation risk. Because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Operational risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations.

Non-diversification risk. The fund is classified as non-diversified under the Investment Company Act of 1940, as amended. This means that the fund may invest in securities of relatively few issuers. Thus, the performance of one or a small number of portfolio holdings can affect overall performance.

If the fund becomes classified as "diversified" over time and again becomes non-diversified as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track, non-diversification risk would apply.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described below under "Buying and Selling Shares"). If those APs exit the business or are unable to process

creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Geographic focus risk. Focusing investments in a single country or few countries, or regions, involves increased political, regulatory and other risks. Market swings in such a targeted country, countries or regions are likely to have a greater effect on fund performance than they would in a more geographically diversified fund.

Risks related to investing in Asia. Investment in securities of issuers in Asia involves risks and special considerations not typically associated with investment in the US securities markets. Certain Asian economies have experienced high inflation, high unemployment, currency devaluations and restrictions, and over-extension of credit. Many Asian economies have experienced rapid growth and industrialization, and there is no assurance that this growth rate will be maintained. During the recent global recession, many of the export-driven Asian economies experienced the effects of the economic slowdown in the United States and Europe, and certain Asian governments implemented stimulus plans, low-rate monetary policies and currency devaluations. Economic events in any one Asian country may have a significant economic effect on the entire Asian region, as well as on major trading partners outside Asia. Any adverse event in the Asian markets may have a significant adverse effect on some or all of the economies of Asian countries in which the fund invests. Many Asian countries are subject to political risk, including corruption and regional conflict with neighboring countries. In addition, many Asian countries are subject to social and labor risks associated with demands for improved political, economic and social conditions.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities or a decline in the value of any investments made with cash collateral. These events, and securities lending in general, could trigger adverse tax consequences for the fund and its investors. For example, if the fund loans its securities, the fund and its investors may lose the ability to treat certain fund distributions associated with those securities as qualified dividend income.

PAST PERFORMANCE

Since the fund commenced operations on December 6, 2018, performance information is not available for a full calendar year.

Once available, the fund's performance information will be accessible on the fund's website at Xtrackers.com (the website does not form a part of this prospectus) and will provide some indication of the risks of investing in the fund by showing changes in the fund's performance and by showing how the fund's returns compare with those of a broad measure of market performance.

MANAGEMENT

Investment Advisor

DBX Advisors LLC

Portfolio Managers

Bryan Richards, CFA, Managing Director. Portfolio Manager of the fund. Began managing the fund in 2018.

Patrick Dwyer, Director. Portfolio Manager of the fund. Began managing the fund in 2018.

Shlomo Bassous, Vice President. Portfolio Manager of the fund. Began managing the fund in 2018.

PURCHASE AND SALE OF FUND SHARES

The fund is an exchange-traded fund (commonly referred to as an "ETF"). Individual fund shares may only be purchased and sold through a brokerage firm. The price of fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The fund will only issue or redeem shares that have been aggregated into blocks of 50,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with ALPS Distributors, Inc., the fund's distributor.

TAX INFORMATION

The fund's distributions are generally taxable to you as ordinary income or capital gains, except when your investment is in an IRA, 401(k), or other tax-deferred investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Xtrackers MSCI EAFE ESG Leaders Equity ETF

Ticker: EASG

Stock Exchange: NYSE Arca, Inc.

INVESTMENT OBJECTIVE

Xtrackers MSCI EAFE ESG Leaders Equity ETF (the “fund”), seeks investment results that correspond generally to the performance, before fees and expenses, of the MSCI EAFE ESG Leaders Index (the “Underlying Index”).

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy and hold shares. You may also pay brokerage commissions on the purchase and sale of shares of the fund, which are not reflected in the table.

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.14
Other Expenses	None
Total annual fund operating expenses	0.14

EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of shares of the fund. It also does not include the transaction fees on purchases and redemptions of Creation Units (defined herein), because those fees will not be imposed on retail investors. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$14	\$45	\$79	\$179

PORTFOLIO TURNOVER

The fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may mean higher taxes if you are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example, and can affect the fund’s performance.

Portfolio turnover rate for the fund, for the period from September 6, 2018 (commencement of operations) through the most recent fiscal year, was 10%.

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is a capitalization weighted index that provides exposure to companies with high environmental, social and governance (“ESG”) performance relative to their sector peers. The Underlying Index consists of large- and medium-capitalization companies across developed markets countries, excluding Canada and the United States. The annual review of the Underlying Index takes place in May and it is rebalanced in August, November and February; the fund updates and rebalances its portfolio in a corresponding fashion.

The Underlying Index uses MSCI ESG Ratings, MSCI ESG Controversies and MSCI Business Involvement Screening Research (collectively, “MSCI ESG Research”) to determine index components for the Underlying Index.

■ MSCI ESG Ratings provides research, analysis and ratings of how well companies manage their ESG risks and opportunities. MSCI ESG Ratings provides a company with an overall ESG rating on a seven point scale, ranging from ‘AAA’ to ‘CCC.’ Existing constituents of the Underlying Index are required to have an MSCI ESG rating of BB or above to remain in the index, and companies that are currently not constituents of the Underlying Index are also required to have an MSCI ESG rating of BB or above to be considered eligible for addition.

■ MSCI ESG Controversies provides assessments of controversies concerning the negative ESG impact of company operations, products and services. MSCI ESG Controversies score companies on a scale of 0 to 10, with 0 being the most severe controversy. Existing constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 1 or above to remain in the index, while companies that are currently not constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 3 or above to be considered eligible for addition.

■ MSCI ESG Business Involvement Screening Research aims to enable institutional investors to manage ESG standards and restrictions reliably and efficiently. Companies that are involved in specific business activities which have high potential for negative social and/or environmental impact, such as alcohol, gambling, tobacco, nuclear power, conventional weapons, nuclear weapons, controversial weapons and civilian firearms, are ineligible for inclusion.

The fund uses a full replication indexing strategy to seek to track the Underlying Index. As such, the fund invests directly in the component securities (or a substantial number of the component securities) of the Underlying Index in substantially the same weightings in which they are represented in the Underlying Index. If it is not possible for the fund to acquire component securities due to limited availability or regulatory restrictions, the fund may use a representative sampling indexing strategy to seek to track the Underlying Index instead of a full replication indexing strategy. "Representative sampling" is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield), and liquidity measures similar to those of the Underlying Index. The fund may or may not hold all of the securities in the Underlying Index when using a representative sampling indexing strategy. The fund will invest at least 80% of its total assets (but typically far more) in component securities (including depositary receipts in respect of such securities) of the Underlying Index.

As of October 31, 2019, the Underlying Index consisted of 435 securities, with an average market capitalization of approximately \$16.6 billion and a minimum market capitalization of approximately \$1.3 billion, from issuers in the following countries: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland and the United Kingdom. The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in equity securities of issuers from

Europe, Australia and the Far East. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of securities of issuers from Japan (24.1%).

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of issuers in the financial services sector (19.4%). The financial services sector includes companies involved in banking, consumer finance, asset management and custody banks, as well as investment banking and brokerage and insurance. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

While the fund is currently classified as "non-diversified" under the Investment Company Act of 1940, it may operate as or become classified as "diversified" over time. The fund could again become non-diversified solely as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track. Shareholder approval will not be sought when the fund crosses from diversified to non-diversified status under such circumstances.

The fund or securities referred to herein are not sponsored, endorsed, issued, sold or promoted by MSCI, and MSCI bears no liability with respect to any the fund or securities or any index on which the fund or securities are based. The Prospectus contains a more detailed description of the limited relationship MSCI has with DBX Advisors LLC and any related funds.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as numerous other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About Fund Strategies, Underlying Index Information and Risks" and in the Statement of Additional Information ("SAI").

ESG investment strategy risk. The Underlying Index's ESG methodology, and thus the fund's investment strategy, limits the types and number of investment opportunities available to the fund and, as a result, the fund may underperform other funds that do not have an ESG focus. The Underlying Index's ESG methodology may result in the fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the index provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

Stock market risk. When stock prices fall, you should expect the value of your investment to fall as well. Stock prices can be hurt by poor management on the part of the stock's issuer, shrinking product demand and other business risks. These may affect single companies as well as groups of companies. The market as a whole may not favor the types of investments the fund makes, which could adversely affect a stock's price, regardless of how well the company performs, or the fund's ability to sell a stock at an attractive price. There is a chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising and falling prices. Events in the US and global financial markets, including actions taken by the US Federal Reserve or foreign central banks to stimulate or stabilize economic growth, may at times result in unusually high market volatility which could negatively affect performance. Further, geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes and related geopolitical events have led, and in the future may lead, to increased short-term market volatility, which may disrupt securities markets and have adverse long-term effects on US and world economies and markets. To the extent that the fund invests in a particular geographic region, capitalization or sector, the fund's performance may be affected by the general performance of that region, capitalization or sector.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund's investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets. To the extent that the fund invests in non-US dollar denominated foreign securities, changes in currency exchange rates may affect the US dollar value of foreign securities or the income or gain received on these securities.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than

those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments.

Depository receipt risk. Depository receipts involve similar risks to those associated with investments in securities of non-US issuers. Depository receipts also may be less liquid than the underlying shares in their primary trading market.

Currency risk. Changes in currency exchange rates and the relative value of non-US currencies may affect the value of the fund's investment and the value of your fund shares. Because the fund's NAV is determined on the basis of the US dollar, investors may lose money if the foreign currency depreciates against the US dollar, even if the foreign currency value of the fund's holdings in that market increases. Conversely, the dollar value of your investment in the fund may go up if the value of the foreign currency appreciates against the US dollar. The value of the US dollar measured against other currencies is influenced by a variety of factors. These factors include: interest rates, national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates. Currency exchange rates can be very volatile and can change quickly and unpredictably. Therefore, the value of an investment in the fund may also go up or down quickly and unpredictably and investors may lose money.

Medium-sized company risk. Medium-sized company stocks tend to be more volatile than large company stocks. Because stock analysts are less likely to follow medium-sized companies, less information about them is available to investors. Industry-wide reversals may have a greater impact on medium-sized companies, since they lack the financial resources of larger companies. Medium-sized company stocks are typically less liquid than large company stocks.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in circumstances where redemptions from the fund may be higher than normal.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Financial services sector risk. To the extent that the fund invests significantly in the financial services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the financial services sector. The financial services sector is subject to extensive government regulation, can be subject to relatively rapid change due to increasingly blurred distinctions between service segments, and can be significantly affected by availability and cost of capital funds, changes in interest rates, the rate of corporate and consumer debt defaults, and price competition. In addition, the deterioration of the credit markets in 2007 and the ensuing financial crisis in 2008 resulted in an unusually high degree of volatility in the financial markets for an extended period of time, the effects of which may persist indefinitely.

Indexing risk. While the exposure of an index to its component securities is by definition 100%, the fund's effective exposure to index securities may vary over time. Because an index fund is designed to maintain a high level of exposure to its Underlying Index at all times, it will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Tracking error risk. The performance of the fund may diverge from that of its Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not

factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. In addition, to the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index) it may cause the fund to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to legal restrictions or limitations imposed by the governments of certain countries, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other regulatory reasons. To the extent the fund calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units (defined below), the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in fund shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the creation/redemption feature is designed to make it likely

that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by the fund may be traded in markets that close at a different time than the exchange on which the fund's shares trade. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when the exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund.

Valuation risk. Because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Operational risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations.

Non-diversification risk. The fund is classified as non-diversified under the Investment Company Act of 1940, as amended. This means that the fund may invest in securities of relatively few issuers. Thus, the performance of one or a small number of portfolio holdings can affect overall performance.

If the fund becomes classified as "diversified" over time and again becomes non-diversified as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track, non-diversification risk would apply.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described below under "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations

where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Geographic focus risk. Focusing investments in a single country or few countries, or regions, involves increased political, regulatory and other risks. Market swings in such a targeted country, countries or regions are likely to have a greater effect on fund performance than they would in a more geographically diversified fund.

European investment risk. European financial markets have experienced volatility in recent years and have been adversely affected by concerns about economic downturns, credit rating downgrades, rising government debt level and possible default on or restructuring of government debt in several European countries. A default or debt restructuring by any European country would adversely impact holders of that country's debt, and sellers of credit default swaps linked to that country's creditworthiness. Most countries in Western Europe are members of the European Union (EU), which faces major issues involving its membership, structure, procedures and policies. In June 2016, citizens of the United Kingdom approved a referendum to leave the EU and in March 2017, the United Kingdom initiated its withdrawal from the EU. Significant uncertainty exists regarding the United Kingdom's anticipated withdrawal from the EU and any adverse economic and political effects such withdrawal may have on the United Kingdom, other EU countries and the global economy, which could be significant, potentially resulting in increased volatility and illiquidity and lower economic growth.

European countries are also significantly affected by fiscal and monetary controls implemented by the European Economic and Monetary Union (EMU), and it is possible that the timing and substance of these controls may not address the needs of all EMU member countries. Investing in euro-denominated securities also risks exposure to a currency that may not fully reflect the strengths and weaknesses of the disparate economies that comprise Europe. There is continued concern over member state-level support for the euro, which could lead to certain countries leaving the EMU, the implementation of currency controls, or potentially the dissolution of the euro. The dissolution of the euro could have significant negative effects on European financial markets.

Risks related to investing in Asia. Investment in securities of issuers in Asia involves risks and special considerations not typically associated with investment in the US securities markets. Certain Asian economies have experienced high inflation, high unemployment, currency devaluations and restrictions, and over-extension of credit. Many Asian economies have experienced rapid growth

and industrialization, and there is no assurance that this growth rate will be maintained. During the recent global recession, many of the export-driven Asian economies experienced the effects of the economic slowdown in the United States and Europe, and certain Asian governments implemented stimulus plans, low-rate monetary policies and currency devaluations. Economic events in any one Asian country may have a significant economic effect on the entire Asian region, as well as on major trading partners outside Asia. Any adverse event in the Asian markets may have a significant adverse effect on some or all of the economies of Asian countries in which the fund invests. Many Asian countries are subject to political risk, including corruption and regional conflict with neighboring countries. In addition, many Asian countries are subject to social and labor risks associated with demands for improved political, economic and social conditions.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities or a decline in the value of any investments made with cash collateral. These events, and securities lending in general, could trigger adverse tax consequences for the fund and its investors. For example, if the fund loans its securities, the fund and its investors may lose the ability to treat certain fund distributions associated with those securities as qualified dividend income.

PAST PERFORMANCE

Since the fund commenced operations on September 6, 2018, performance information is not available for a full calendar year.

Once available, the fund's performance information will be accessible on the fund's website at Xtrackers.com (the website does not form a part of this prospectus) and will provide some indication of the risks of investing in the fund by showing changes in the fund's performance and by showing how the fund's returns compare with those of a broad measure of market performance.

Portfolio Managers

Bryan Richards, CFA, Managing Director. Portfolio Manager of the fund. Began managing the fund in 2018.

Patrick Dwyer, Director. Portfolio Manager of the fund. Began managing the fund in 2018.

Shlomo Bassous, Vice President. Portfolio Manager of the fund. Began managing the fund in 2018.

PURCHASE AND SALE OF FUND SHARES

The fund is an exchange-traded fund (commonly referred to as an "ETF"). Individual fund shares may only be purchased and sold through a brokerage firm. The price of fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The fund will only issue or redeem shares that have been aggregated into blocks of 50,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with ALPS Distributors, Inc., the fund's distributor.

TAX INFORMATION

The fund's distributions are generally taxable to you as ordinary income or capital gains, except when your investment is in an IRA, 401(k), or other tax-deferred investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Xtrackers MSCI ACWI ex USA ESG Leaders Equity ETF

Ticker: ACSG

Stock Exchange: NYSE Arca, Inc.

INVESTMENT OBJECTIVE

Xtrackers MSCI ACWI ex USA ESG Leaders Equity ETF (the “fund”), seeks investment results that correspond generally to the performance, before fees and expenses, of the MSCI ACWI ex USA ESG Leaders Index (the “Underlying Index”).

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy and hold shares. You may also pay brokerage commissions on the purchase and sale of shares of the fund, which are not reflected in the table.

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.16
Other Expenses	None
Total annual fund operating expenses	0.16

EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of shares of the fund. It also does not include the transaction fees on purchases and redemptions of Creation Units (defined herein), because those fees will not be imposed on retail investors. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$16	\$52	\$90	\$205

PORTFOLIO TURNOVER

The fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may mean higher taxes if you are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example, and can affect the fund’s performance.

Portfolio turnover rate for the fund, for the period from December 6, 2018 (commencement of operations) through the most recent fiscal year, was 10%.

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is a capitalization weighted index that provides exposure to companies with high environmental, social and governance (“ESG”) performance relative to their sector peers. The Underlying Index is constructed using regional indexes that provide exposure to large- and medium-capitalization companies from developed and emerging markets countries (excluding the United States). The annual review of the Underlying Index takes place in May and it is rebalanced in August, November and February; the fund updates and rebalances its portfolio in a corresponding fashion.

The Underlying Index uses MSCI ESG Ratings, MSCI ESG Controversies and MSCI Business Involvement Screening Research (collectively, “MSCI ESG Research”) to determine index components for the Underlying Index.

■ MSCI ESG Ratings provides research, analysis and ratings of how well companies manage their ESG risks and opportunities. MSCI ESG Ratings provides a company with an overall ESG rating on a seven point scale, ranging

from 'AAA' to 'CCC.' Existing constituents of the Underlying Index are required to have an MSCI ESG rating of BB or above to remain in the index, and companies that are currently not constituents of the Underlying Index are also required to have an MSCI ESG rating of BB or above to be considered eligible for addition.

■ MSCI ESG Controversies provides assessments of controversies concerning the negative ESG impact of company operations, products and services. MSCI ESG Controversies score companies on a scale of 0 to 10, with 0 being the most severe controversy. Existing constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 1 or above to remain in the index, while companies that are currently not constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 3 or above to be considered eligible for addition.

■ MSCI ESG Business Involvement Screening Research aims to enable institutional investors to manage ESG standards and restrictions reliably and efficiently. Companies that are involved in specific business activities which have high potential for negative social and/or environmental impact, such as alcohol, gambling, tobacco, nuclear power, conventional weapons, nuclear weapons, controversial weapons and civilian firearms, are ineligible for inclusion.

The fund uses a full replication indexing strategy to seek to track the Underlying Index. As such, the fund invests directly in the component securities (or a substantial number of the component securities) of the Underlying Index in substantially the same weightings in which they are represented in the Underlying Index. If it is not possible for the fund to acquire component securities due to limited availability or regulatory restrictions, the fund may use a representative sampling indexing strategy to seek to track the Underlying Index instead of a full replication indexing strategy. "Representative sampling" is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield), and liquidity measures similar to those of the Underlying Index. The fund may or may not hold all of the securities in the Underlying Index when using a representative sampling indexing strategy. The fund will invest at least 80% of its total assets (but typically far more) in component securities (including depositary receipts in respect of such securities) of the Underlying Index.

As of October 31, 2019, the Underlying Index consisted of 911 securities, with an average market capitalization of approximately \$11.9 billion and a minimum market capitalization of approximately \$79 million from issuers in the following countries: Argentina, Austria, Australia, Belgium, Brazil, Canada, Chile, China, Colombia, Czech Republic,

Denmark, Egypt, Finland, France, Germany, Greece, Hong Kong, Hungary, India, Indonesia, Ireland, Israel, Italy, Japan, Korea, Malaysia, Mexico, the Netherlands, New Zealand, Norway, Pakistan, Peru, Philippines, Poland, Portugal, Qatar, Russia, Saudi Arabia, Singapore, South Africa, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, the United Arab Emirates and the United Kingdom. The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in equity securities from countries other than the United States. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of securities of issuers from Japan (16.1%).

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of issuers in the financial services sector (22.2%). The financial services sector includes companies involved in banking, consumer finance, asset management and custody banks, as well as investment banking and brokerage and insurance. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

While the fund is currently classified as "non-diversified" under the Investment Company Act of 1940, it may operate as or become classified as "diversified" over time. The fund could again become non-diversified solely as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track. Shareholder approval will not be sought when the fund crosses from diversified to non-diversified status under such circumstances.

The fund or securities referred to herein are not sponsored, endorsed, issued, sold or promoted by MSCI, and MSCI bears no liability with respect to any the fund or securities or any index on which the fund or securities are based. The Prospectus contains a more detailed description of the limited relationship MSCI has with DBX Advisors LLC and any related funds.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect

the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as numerous other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About Fund Strategies, Underlying Index Information and Risks" and in the Statement of Additional Information ("SAI").

ESG investment strategy risk. The Underlying Index's ESG methodology, and thus the fund's investment strategy, limits the types and number of investment opportunities available to the fund and, as a result, the fund may underperform other funds that do not have an ESG focus. The Underlying Index's ESG methodology may result in the fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the index provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

Stock market risk. When stock prices fall, you should expect the value of your investment to fall as well. Stock prices can be hurt by poor management on the part of the stock's issuer, shrinking product demand and other business risks. These may affect single companies as well as groups of companies. The market as a whole may not favor the types of investments the fund makes, which could adversely affect a stock's price, regardless of how well the company performs, or the fund's ability to sell a stock at an attractive price. There is a chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising and falling prices. Events in the US and global financial markets, including actions taken by the US Federal Reserve or foreign central banks to stimulate or stabilize economic growth, may at times result in unusually high market volatility which could negatively affect performance. Further, geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes and related geopolitical events have led, and in the future may lead, to increased short-term market volatility, which may disrupt securities markets and have adverse long-term effects on US and world economies and markets. To the extent that the fund invests in a particular geographic region, capitalization or sector, the fund's performance may be affected by the general performance of that region, capitalization or sector.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund's investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets. To the extent that the fund invests in non-US dollar denominated foreign

securities, changes in currency exchange rates may affect the US dollar value of foreign securities or the income or gain received on these securities.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments.

Depository receipt risk. Depository receipts involve similar risks to those associated with investments in securities of non-US issuers. Depository receipts also may be less liquid than the underlying shares in their primary trading market.

Currency risk. Changes in currency exchange rates and the relative value of non-US currencies may affect the value of the fund's investment and the value of your fund shares. Because the fund's NAV is determined on the basis of the US dollar, investors may lose money if the foreign currency depreciates against the US dollar, even if the foreign currency value of the fund's holdings in that market increases. Conversely, the dollar value of your investment in the fund may go up if the value of the foreign currency appreciates against the US dollar. The value of the US dollar measured against other currencies is influenced by a variety of factors. These factors include: interest rates, national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates. Currency exchange rates can be very volatile and can change quickly and unpredictably. Therefore, the value of an investment in the fund may also go up or down quickly and unpredictably and investors may lose money.

Emerging market securities risk. The securities of issuers located in emerging markets tend to be more volatile and less liquid than securities of issuers located in more mature economies, and emerging markets generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. The securities of issuers located or doing substantial business in emerging markets are often subject to rapid and large changes in price.

Medium-sized company risk. Medium-sized company stocks tend to be more volatile than large company stocks. Because stock analysts are less likely to follow medium-sized companies, less information about them is available to investors. Industry-wide reversals may have a greater impact on medium-sized companies, since they lack the financial resources of larger companies. Medium-sized company stocks are typically less liquid than large company stocks.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in circumstances where redemptions from the fund may be higher than normal.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Financial services sector risk. To the extent that the fund invests significantly in the financial services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the financial services sector. The financial services sector is subject to extensive government regulation, can be subject to relatively rapid change due to increasingly blurred distinctions between service segments, and can be significantly affected by availability and cost of capital funds, changes in interest rates, the rate of corporate and consumer debt defaults, and price competition. In addition, the deterioration of the credit markets in 2007 and the ensuing financial crisis in 2008

resulted in an unusually high degree of volatility in the financial markets for an extended period of time, the effects of which may persist indefinitely.

Indexing risk. While the exposure of an index to its component securities is by definition 100%, the fund's effective exposure to index securities may vary over time. Because an index fund is designed to maintain a high level of exposure to its Underlying Index at all times, it will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Tracking error risk. The performance of the fund may diverge from that of its Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. In addition, to the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index) it may cause the fund to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to legal restrictions or limitations imposed by the governments of certain countries, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other regulatory reasons. To the extent the fund calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate

from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units (defined below), the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in fund shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by the fund may be traded in markets that close at a different time than the exchange on which the fund's shares trade. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when the exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund.

Valuation risk. Because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Operational risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market

participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations.

Non-diversification risk. The fund is classified as non-diversified under the Investment Company Act of 1940, as amended. This means that the fund may invest in securities of relatively few issuers. Thus, the performance of one or a small number of portfolio holdings can affect overall performance.

If the fund becomes classified as "diversified" over time and again becomes non-diversified as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track, non-diversification risk would apply.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described below under "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Geographic focus risk. Focusing investments in a single country or few countries, or regions, involves increased political, regulatory and other risks. Market swings in such a targeted country, countries or regions are likely to have a greater effect on fund performance than they would in a more geographically diversified fund.

European investment risk. European financial markets have experienced volatility in recent years and have been adversely affected by concerns about economic downturns, credit rating downgrades, rising government debt level and possible default on or restructuring of government debt in several European countries. A default or debt restructuring by any European country would adversely impact holders of that country's debt, and sellers of credit default swaps linked to that country's creditworthiness. Most countries in Western Europe are members of the European Union (EU), which faces major issues involving its membership, structure, procedures and policies. In June 2016, citizens of the United Kingdom approved a referendum to leave the EU and in March 2017, the United Kingdom initiated its withdrawal from the EU. Significant uncertainty exists regarding the United Kingdom's anticipated withdrawal from the EU and any adverse economic and political effects such withdrawal may have on the

United Kingdom, other EU countries and the global economy, which could be significant, potentially resulting in increased volatility and illiquidity and lower economic growth.

European countries are also significantly affected by fiscal and monetary controls implemented by the European Economic and Monetary Union (EMU), and it is possible that the timing and substance of these controls may not address the needs of all EMU member countries. Investing in euro-denominated securities also risks exposure to a currency that may not fully reflect the strengths and weaknesses of the disparate economies that comprise Europe. There is continued concern over member state-level support for the euro, which could lead to certain countries leaving the EMU, the implementation of currency controls, or potentially the dissolution of the euro. The dissolution of the euro could have significant negative effects on European financial markets.

Risks related to investing in Asia. Investment in securities of issuers in Asia involves risks and special considerations not typically associated with investment in the US securities markets. Certain Asian economies have experienced high inflation, high unemployment, currency devaluations and restrictions, and over-extension of credit. Many Asian economies have experienced rapid growth and industrialization, and there is no assurance that this growth rate will be maintained. During the recent global recession, many of the export-driven Asian economies experienced the effects of the economic slowdown in the United States and Europe, and certain Asian governments implemented stimulus plans, low-rate monetary policies and currency devaluations. Economic events in any one Asian country may have a significant economic effect on the entire Asian region, as well as on major trading partners outside Asia. Any adverse event in the Asian markets may have a significant adverse effect on some or all of the economies of Asian countries in which the fund invests. Many Asian countries are subject to political risk, including corruption and regional conflict with neighboring countries. In addition, many Asian countries are subject to social and labor risks associated with demands for improved political, economic and social conditions.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities or a decline in the value of any investments made with cash collateral. These events, and securities lending in general, could trigger adverse tax consequences for the fund and its investors. For example, if the fund loans its securities, the fund and its investors may lose the ability to treat certain fund distributions associated with those securities as qualified dividend income.

PAST PERFORMANCE

Since the fund commenced operations on December 6, 2018, performance information is not available for a full calendar year.

Once available, the fund's performance information will be accessible on the fund's website at Xtrackers.com (the website does not form a part of this prospectus) and will provide some indication of the risks of investing in the fund by showing changes in the fund's performance and by showing how the fund's returns compare with those of a broad measure of market performance.

MANAGEMENT

Investment Advisor

DBX Advisors LLC

Portfolio Managers

Bryan Richards, CFA, Managing Director. Portfolio Manager of the fund. Began managing the fund in 2018.

Patrick Dwyer, Director. Portfolio Manager of the fund. Began managing the fund in 2018.

Shlomo Bassous, Vice President. Portfolio Manager of the fund. Began managing the fund in 2018.

PURCHASE AND SALE OF FUND SHARES

The fund is an exchange-traded fund (commonly referred to as an "ETF"). Individual fund shares may only be purchased and sold through a brokerage firm. The price of fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The fund will only issue or redeem shares that have been aggregated into blocks of 50,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with ALPS Distributors, Inc., the fund's distributor.

TAX INFORMATION

The fund's distributions are generally taxable to you as ordinary income or capital gains, except when your investment is in an IRA, 401(k), or other tax-deferred investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing

the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Xtrackers MSCI USA ESG Leaders Equity ETF

Ticker: USSG

Stock Exchange: NYSE Arca, Inc.

INVESTMENT OBJECTIVE

Xtrackers MSCI USA ESG Leaders Equity ETF (the “fund”), seeks investment results that correspond generally to the performance, before fees and expenses, of the MSCI USA ESG Leaders Index (the “Underlying Index”).

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy and hold shares. You may also pay brokerage commissions on the purchase and sale of shares of the fund, which are not reflected in the table.

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.10
Other Expenses ¹	None
Total annual fund operating expenses	0.10

¹ Because the fund is new, “Other Expenses” are based on estimated amounts for the current fiscal year.

EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of shares of the fund. It also does not include the transaction fees on purchases and redemptions of Creation Units (defined herein), because those fees will not be imposed on retail investors. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$10	\$32

PORTFOLIO TURNOVER

The fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may mean higher taxes if you are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example, and can affect the fund’s performance.

Portfolio turnover rate for the fund, for the period from March 7, 2019 (commencement of operations) through the most recent fiscal year, was 5%.

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is a capitalization weighted index that provides exposure to companies with high environmental, social and governance (“ESG”) performance relative to their sector peers. The Underlying Index consists of large- and medium-capitalization companies in the US market. The annual review of the Underlying Index takes place in May and it is rebalanced in August, November and February; the fund updates and rebalances its portfolio in a corresponding fashion.

The Underlying Index uses MSCI ESG Ratings, MSCI ESG Controversies and MSCI Business Involvement Screening Research (collectively, “MSCI ESG Research”) to determine index components for the Underlying Index.

- MSCI ESG Ratings provides research, analysis and ratings of how well companies manage their ESG risks and opportunities. MSCI ESG Ratings provides a company with an overall ESG rating on a seven point scale, ranging from ‘AAA’ to ‘CCC.’ Existing constituents of the Underlying Index are required to have an MSCI ESG rating of BB or

above to remain in the index, and companies that are currently not constituents of the Underlying Index are also required to have an MSCI ESG rating of BB or above to be considered eligible for addition.

■ MSCI ESG Controversies provides assessments of controversies concerning the negative ESG impact of company operations, products and services. A controversy case is defined as an instance or ongoing situation in which company operations and/or products allegedly have a negative environmental, social, and/or governance impact. A case is typically a single event such as a spill, accident, regulatory action, or a set of closely linked events or allegations such as health and safety fines at the same facility, multiple allegations of anti-competitive behavior related to the same product line, multiple community protests at the same company location, or multiple individual lawsuits alleging the same type of discrimination. MSCI ESG Controversies score companies on a scale of 0 to 10, with 0 being the most severe controversy. Existing constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 1 or above to remain in the index, while companies that are currently not constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 3 or above to be considered eligible for addition.

■ MSCI ESG Business Involvement Screening Research aims to enable institutional investors to manage ESG standards and restrictions reliably and efficiently. Companies that are involved in specific business activities which have high potential for negative social and/or environmental impact, such as alcohol, gambling, tobacco, nuclear power, conventional weapons, nuclear weapons, controversial weapons and civilian firearms, are ineligible for inclusion.

The fund uses a full replication indexing strategy to seek to track the Underlying Index. As such, the fund invests directly in the component securities (or a substantial number of the component securities) of the Underlying Index in substantially the same weightings in which they are represented in the Underlying Index. If it is not possible for the fund to acquire component securities due to limited availability or regulatory restrictions, the fund may use a representative sampling indexing strategy to seek to track the Underlying Index instead of a full replication indexing strategy. "Representative sampling" is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield), and liquidity measures similar to those of the Underlying Index. The fund may or may not hold all of the securities in the Underlying Index when using a representative

sampling indexing strategy. The fund will invest at least 80% of its total assets (but typically far more) in component securities of the Underlying Index.

As of October 31, 2019, the Underlying Index consisted of 324 securities, with an average market capitalization of approximately \$41.5 billion and a minimum market capitalization of approximately \$3.1 billion. The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in listed equity securities of issuers incorporated in the United States.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of issuers in the information technology sector (22.6%). The information technology sector includes companies engaged in developing software and providing data processing and outsourced services, along with manufacturing and distributing communications equipment, computers and other electronic equipment and instruments. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

While the fund is currently classified as "non-diversified" under the Investment Company Act of 1940, it may operate as or become classified as "diversified" over time. The fund could again become non-diversified solely as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track. Shareholder approval will not be sought when the fund crosses from diversified to non-diversified status under such circumstances.

The fund or securities referred to herein are not sponsored, endorsed, issued, sold or promoted by MSCI, and MSCI bears no liability with respect to any the fund or securities or any index on which the fund or securities are based. The Prospectus contains a more detailed description of the limited relationship MSCI has with DBX Advisors LLC and any related funds.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect

the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as numerous other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About Fund Strategies, Underlying Index Information and Risks" and in the Statement of Additional Information ("SAI").

ESG investment strategy risk. The Underlying Index's ESG methodology, and thus the fund's investment strategy, limits the types and number of investment opportunities available to the fund and, as a result, the fund may underperform other funds that do not have an ESG focus. The Underlying Index's ESG methodology may result in the fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the index provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

Stock market risk. When stock prices fall, you should expect the value of your investment to fall as well. Stock prices can be hurt by poor management on the part of the stock's issuer, shrinking product demand and other business risks. These may affect single companies as well as groups of companies. The market as a whole may not favor the types of investments the fund makes, which could adversely affect a stock's price, regardless of how well the company performs, or the fund's ability to sell a stock at an attractive price. There is a chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising and falling prices. Events in the US and global financial markets, including actions taken by the US Federal Reserve or foreign central banks to stimulate or stabilize economic growth, may at times result in unusually high market volatility which could negatively affect performance. Further, geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes and related geopolitical events have led, and in the future may lead, to increased short-term market volatility, which may disrupt securities markets and have adverse long-term effects on US and world economies and markets. To the extent that the fund invests in a particular geographic region, capitalization or sector, the fund's performance may be affected by the general performance of that region, capitalization or sector.

Medium-sized company risk. Medium-sized company stocks tend to be more volatile than large company stocks. Because stock analysts are less likely to follow medium-sized companies, less information about them is available to investors. Industry-wide reversals may have a greater impact on medium-sized companies, since they lack the financial resources of larger companies. Medium-sized company stocks are typically less liquid than large company stocks.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in circumstances where redemptions from the fund may be higher than normal.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Information technology sector risk. To the extent that the fund invests significantly in the information technology sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the information technology sector. Information technology companies are particularly vulnerable to government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Information technology companies also face competition for services of qualified personnel. Additionally, the products of information technology companies may face obsolescence due to rapid technological development and frequent new product introduction by competitors. Finally, information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Indexing risk. While the exposure of an index to its component securities is by definition 100%, the fund's effective exposure to index securities may vary over time. Because an index fund is designed to maintain a high level of exposure to its Underlying Index at all times, it will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Tracking error risk. The performance of the fund may diverge from that of its Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes

in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. In addition, to the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index) it may cause the fund to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to legal restrictions or limitations imposed by the governments of certain countries, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other regulatory reasons. To the extent the fund calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units (defined below), the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in fund shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the

creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. Secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund.

Operational risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described below under "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Non-diversification risk. The fund is classified as non-diversified under the Investment Company Act of 1940, as amended. This means that the fund may invest in securities of relatively few issuers. Thus, the performance of one or a small number of portfolio holdings can affect overall performance.

If the fund becomes classified as "diversified" over time and again becomes non-diversified as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track, non-diversification risk would apply.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided

for the loaned securities or a decline in the value of any investments made with cash collateral. These events, and securities lending in general, could trigger adverse tax consequences for the fund and its investors. For example, if the fund loans its securities, the fund and its investors may lose the ability to treat certain fund distributions associated with those securities as qualified dividend income.

PAST PERFORMANCE

Since the fund commenced operations on March 7, 2019, performance information is not available for a full calendar year.

Once available, the fund's performance information will be accessible on the fund's website at Xtrackers.com (the website does not form a part of this prospectus) and will provide some indication of the risks of investing in the fund by showing changes in the fund's performance and by showing how the fund's returns compare with those of a broad measure of market performance.

MANAGEMENT

Investment Advisor

DBX Advisors LLC

Portfolio Managers

Bryan Richards, CFA, Managing Director. Portfolio Manager of the fund. Began managing the fund in 2019.

Patrick Dwyer, Director. Portfolio Manager of the fund. Began managing the fund in 2019.

Shlomo Bassous, Vice President. Portfolio Manager of the fund. Began managing the fund in 2019.

PURCHASE AND SALE OF FUND SHARES

The fund is an exchange-traded fund (commonly referred to as an "ETF"). Individual fund shares may only be purchased and sold through a brokerage firm. The price of fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The fund will only issue or redeem shares that have been aggregated into blocks of 50,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with ALPS Distributors, Inc., the fund's distributor.

TAX INFORMATION

The fund's distributions are generally taxable to you as ordinary income or capital gains, except when your investment is in an IRA, 401(k), or other tax-deferred investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Fund Details

ADDITIONAL INFORMATION ABOUT FUND STRATEGIES, UNDERLYING INDEX INFORMATION AND RISKS

Xtrackers MSCI Emerging Markets ESG Leaders Equity ETF

INVESTMENT OBJECTIVE

Xtrackers MSCI Emerging Markets ESG Leaders Equity ETF (the “fund”), seeks investment results that correspond generally to the performance, before fees and expenses, of the MSCI Emerging Markets ESG Leaders Index (the “Underlying Index”).

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is a capitalization weighted index that provides exposure to companies with high environmental, social and governance (“ESG”) performance relative to their sector peers. The Underlying Index consists of large- and medium-capitalization companies across emerging markets countries. Emerging markets countries are countries that major international financial institutions, such as the World Bank, generally consider to be less economically mature than developed nations. Emerging markets countries can include every nation in the world except the United States, Canada, Japan, Australia, New Zealand and countries located in Western Europe. The annual review of the Underlying Index takes place in May and it is rebalanced in August, November and February; the fund updates and rebalances its portfolio in a corresponding fashion.

The Underlying Index uses MSCI ESG Ratings, MSCI ESG Controversies and MSCI Business Involvement Screening Research (collectively, “MSCI ESG Research”) to determine index components for the Underlying Index.

■ MSCI ESG Ratings provides research, analysis and ratings of how well companies manage their ESG risks and opportunities. MSCI ESG Ratings provides a company with an overall ESG rating on a seven point scale, ranging from ‘AAA’ to ‘CCC.’ Existing constituents of the Underlying Index are required to have an MSCI ESG rating of BB or

above to remain in the index, and companies that are currently not constituents of the Underlying Index are also required to have an MSCI ESG rating of BB or above to be considered eligible for addition.

■ MSCI ESG Controversies provides assessments of controversies concerning the negative ESG impact of company operations, products and services. MSCI ESG Controversies score companies on a scale of 0 to 10, with 0 being the most severe controversy. Existing constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 1 or above to remain in the index, while companies that are currently not constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 3 or above to be considered eligible for addition.

■ MSCI ESG Business Involvement Screening Research aims to enable institutional investors to manage ESG standards and restrictions reliably and efficiently. Companies that are involved in specific business activities which have high potential for negative social and/or environmental impact, such as alcohol, gambling, tobacco, nuclear power, conventional weapons, nuclear weapons, controversial weapons and civilian firearms, are ineligible for inclusion.

The fund uses a full replication indexing strategy to seek to track the Underlying Index. As such, the fund invests directly in the component securities (or a substantial number of the component securities) of the Underlying Index in substantially the same weightings in which they are represented in the Underlying Index. If it is not possible for the fund to acquire component securities due to limited availability or regulatory restrictions, the fund may use a representative sampling indexing strategy to seek to track the Underlying Index instead of a full replication indexing strategy. “Representative sampling” is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield), and liquidity measures similar to those of the Underlying Index. The fund may or may not hold all of the securities in the Underlying Index when using a representative

sampling indexing strategy. The fund will invest at least 80% of its total assets (but typically far more) in component securities (including depositary receipts in respect of such securities) of the Underlying Index.

As of October 31, 2019, the Underlying Index consisted of 436 securities, with an average market capitalization of approximately \$6.5 billion and a minimum market capitalization of approximately \$79 million, from issuers in the following countries: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Qatar, Russia, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey and the United Arab Emirates. The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in equity securities of issuers from emerging markets countries. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of securities of issuers from China (29.1%) and Taiwan (16.9%).

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of issuers in the financial services (25.6%), consumer discretionary (16.5%), and information technology (15.1%) sectors. The financial services sector includes companies involved in banking, consumer finance, asset management and custody banks, as well as investment banking and brokerage and insurance. The consumer discretionary goods sector includes durable goods, apparel, entertainment and leisure, and automobiles. The information technology sector includes companies engaged in developing software and providing data processing and outsourced services, along with manufacturing and distributing communications equipment, computers and other electronic equipment and instruments. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

While the fund is currently classified as "non-diversified" under the Investment Company Act of 1940, it may operate as or become classified as "diversified" over time. The fund could again become non-diversified solely as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track. Shareholder approval will not be sought when the fund crosses from diversified to non-diversified status under such circumstances.

The fund may invest its remaining assets in other securities, including securities not in the Underlying Index, cash and cash equivalents, money market instruments, such as repurchase agreements or money market funds (including money market funds advised by the Advisor or its affiliates (subject to applicable limitations under the

1940 Act), or exemptions therefrom), convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index) and in futures contracts, options on futures contracts and other types of options and swaps related to its Underlying Index. The fund will not use futures and options for speculative purposes.

The fund may also invest in depositary receipts in respect of equity securities that comprise its Underlying Index to seek performance that corresponds to the fund's respective Underlying Index. Investments in such depositary receipts will count towards the fund's 80% investment policy discussed above with respect to instruments that comprise the fund's Underlying Index.

The fund expects to use futures contracts to a limited extent in seeking performance that corresponds to its Underlying Index.

The fund or securities referred to herein are not sponsored, endorsed, issued, sold or promoted by MSCI, and MSCI bears no liability with respect to any the fund or securities or any index on which the fund or securities are based. The Prospectus contains a more detailed description of the limited relationship MSCI has with DBX Advisors LLC and any related funds.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

Underlying Index Information

MSCI Emerging Markets ESG Leaders Index

Number of Components: approximately 436

Index Description. The MSCI Emerging Markets ESG Leaders Index is a capitalization weighted index that provides exposure to companies with high environmental, social and governance ("ESG") performance relative to their sector peers. The Underlying Index consists of large and medium capitalization companies across emerging markets countries. The country pool consists of the following set of countries: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Qatar, Russia, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey and the United Arab Emirates.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective.

ESG investment strategy risk. The Underlying Index's ESG methodology, and thus the fund's investment strategy, limits the types and number of investment opportunities available to the fund and, as a result, the fund may underperform other funds that do not have an ESG focus. The Underlying Index's ESG methodology may result in the fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the index provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

Stock market risk. When stock prices fall, you should expect the value of your investment to fall as well. Stock prices can be hurt by poor management on the part of the stock's issuer, shrinking product demand and other business risks. These may affect single companies as well as groups of companies. The market as a whole may not favor the types of investments the fund makes, which could adversely affect a stock's price, regardless of how well the company performs, or the fund's ability to sell a stock at an attractive price. There is a chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising and falling prices. Events in the US and global financial markets, including actions taken by the US Federal Reserve or foreign central banks to stimulate or stabilize economic growth, may at times result in unusually high market volatility which could negatively affect performance. Further, geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes and related geopolitical events have led, and in the future may lead, to increased short-term market volatility, which may disrupt securities markets and have adverse long-term effects on US and world economies and markets. To the extent that the fund invests in a particular geographic region, capitalization or sector, the fund's performance may be affected by the general performance of that region, capitalization or sector.

Emerging market securities risk. Investment in emerging markets subjects the fund to a greater risk of loss than investments in a developed market. This is due to, among other things, (i) greater market volatility, (ii) lower trading volume, (iii) political and economic instability, (iv) high levels of inflation, deflation or currency devaluation, (v) greater risk of market shut down, (vi) more governmental limitations on foreign investments and limitations on repatriation of invested capital than those typically found in a developed market, and (vii) the risk that companies may be

held to lower disclosure, corporate governance, auditing and financial reporting standards than companies in more developed markets.

The financial stability of issuers (including governments) in emerging market countries may be more precarious than in other countries. As a result, there will tend to be an increased risk of price volatility in the fund's investments in emerging market countries, which may be magnified by currency fluctuations relative to the US dollar.

Settlement practices for transactions in foreign markets may differ from those in US markets. Such differences include delays beyond periods customary in the US and practices, such as delivery of securities prior to receipt of payment, which increase the likelihood of a "failed settlement." Failed settlements can result in losses to the fund. Low trading volumes and volatile prices in less developed markets make trades harder to complete and settle, and governments or trade groups may compel local agents to hold securities in designated depositories that are not subject to independent evaluation. Local agents are held only to the standards of care of their local markets.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund's investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets. To the extent that the fund invests in non-US dollar denominated foreign securities, changes in currency exchange rates may affect the US dollar value of foreign securities or the income or gain received on these securities.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments.

Depository receipt risk. Foreign investments in American Depository Receipts and other depository receipts may be less liquid than the underlying shares in their primary trading market. Certain of the depository receipts in which the fund invests may be unsponsored depository receipts. Unsponsored depository receipts may not provide as much information about the underlying issuer and may not carry the same voting privileges as sponsored depository receipts. Unsponsored depository receipts are issued by one or more depositaries in response to market demand, but without a formal agreement with the company that issues the underlying securities.

Currency risk. Changes in currency exchange rates and the relative value of non-US currencies may affect the value of the fund's investment and the value of your fund shares. Because the fund's NAV is determined on the basis of the US dollar, investors may lose money if the foreign currency depreciates against the US dollar, even if the foreign currency value of the fund's holdings in that market increases. Conversely, the dollar value of your investment in the fund may go up if the value of the foreign currency appreciates against the US dollar. The value of the US dollar measured against other currencies is influenced by a variety of factors. These factors include: interest rates, national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates. Currency exchange rates can be very volatile and can change quickly and unpredictably. Therefore, the value of an investment in the fund may also go up or down quickly and unpredictably and investors may lose money.

Medium-sized company risk. Medium-sized company stocks tend to be more volatile than large company stocks. Because stock analysts are less likely to follow medium-sized companies, less information about them is available to investors. Industry-wide reversals may have a greater impact on medium-sized companies, since they lack the financial resources of larger companies. Medium-sized company stocks are typically less liquid than large company stocks.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally

liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in circumstances where redemptions from the fund may be higher than normal.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Financial services sector risk. To the extent that the fund invests significantly in the financial services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the financial services sector. The financial services sector is subject to extensive government regulation, can be subject to relatively rapid change due to increasingly blurred distinctions between service segments, and can be significantly affected by availability and cost of capital funds, changes in interest rates, the rate of corporate and consumer debt defaults, and price competition. In addition, the deterioration of the credit markets in 2007 and the ensuing financial crisis in 2008 resulted in an unusually high degree of volatility in the financial markets for an extended period of time, the effects of which may persist indefinitely.

Numerous financial services companies have experienced substantial declines in the valuations of their assets, taken action to raise capital (such as the issuance of debt or equity securities), or even ceased operations. These actions have caused the securities of many financial services companies to experience a dramatic decline in value. Moreover, certain financial companies have avoided collapse due to intervention by governmental regulatory authorities, but such interventions have often not averted a substantial decline in the value of such companies' common stock. Issuers that have exposure to the real estate, mortgage and credit markets have been particularly affected by the foregoing events and the general market turmoil, and it is uncertain whether or for how long these conditions will continue.

Consumer discretionary sector risk. To the extent that the fund invests significantly in the consumer discretionary sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political

and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Information technology sector risk. To the extent that the fund invests significantly in the information technology sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the information technology sector. Information technology companies are particularly vulnerable to government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Information technology companies also face competition for services of qualified personnel. Additionally, the products of information technology companies may face obsolescence due to rapid technological development and frequent new product introduction by competitors. Finally, information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Indexing risk. While the exposure of an index to its component securities is by definition 100%, the fund's effective exposure to index securities may vary over time. Because an index fund is designed to maintain a high level of exposure to its Underlying Index at all times, it will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Tracking error risk. The performance of the fund may diverge from that of its Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. In addition, to the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index) it may cause the fund to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be

identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to legal restrictions or limitations imposed by the governments of certain countries, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other regulatory reasons. To the extent the fund calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

The need to comply with the tax diversification and other requirements of the Internal Revenue Code may also impact the fund's ability to replicate the performance of its Underlying Index. In addition, if the fund utilizes derivative instruments or holds other instruments that are not included in its Underlying Index, its return may not correlate as well with the returns of its Underlying Index as would be the case if the fund purchased all the securities in its Underlying Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from NAV during periods of market volatility. Differences between secondary market prices and the value of the fund's holdings may be due largely to supply and demand forces in the secondary market, which may not be the same forces as those influencing prices for securities held by the fund at a particular time. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units, the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. In addition, there may be times when the market price and the value of the fund's holdings vary significantly and you may pay more than the value of the fund's holdings when buying shares on the secondary market, and you may receive less than the value of the fund's holdings when you sell those shares. While the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market

participants, or during periods of significant market volatility, may result in trading prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. If market makers exit the business or are unable to continue making markets in fund's shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). The market price of shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialist, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that shares may trade at a discount to the fund's NAV, and the discount is likely to be greatest when the price of shares is falling fastest, which may be the time that you most want to sell your shares. There are various methods by which investors can purchase and sell shares of the funds and various orders that may be placed. Investors should consult their financial intermediary before purchasing or selling shares of the fund.

In addition, the securities held by the fund may be traded in markets that close at a different time than an exchange. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when an exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. More generally, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The bid-ask spread varies over time for shares of the fund based on the fund's trading volume and market liquidity, and is generally lower if the fund has substantial trading volume and market liquidity, and higher if the fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size). The fund's bid-ask spread may also be impacted by the liquidity of the underlying securities held by the fund, particularly for newly launched or smaller funds or in instances of significant volatility of the underlying securities. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on an exchange and may, therefore, have a material effect on the market price of the fund's shares.

Valuation risk. Because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Operational risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations.

Cyber-attacks may include unauthorized attempts by third parties to improperly access, modify, disrupt the operations of, or prevent access to the systems of the fund's service providers or counterparties, issuers of securities held by the fund or other market participants or data within them. In addition, power or communications outages, acts of god, information technology equipment malfunctions, operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data. Market events also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

Cyber-attacks, disruptions, or failures may adversely affect the fund and its shareholders or cause reputational damage and subject the fund to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted, and operations may be disrupted (e.g., cyber-attacks or operational failures may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value, and impede trading). In addition, cyber-attacks, disruptions, or failures involving a fund counterparty could affect such counterparty's ability to meet its obligations to the fund, which may result in losses to the fund and its shareholders. Similar types of operational and technology risks are also present for issuers of securities held by the fund, which could have material adverse consequences for such issuers, and may cause the fund's investments to lose value. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions, or failures, there are inherent limitations in such plans and systems, including that they

do not apply to third parties, such as fund counterparties, issuers of securities held by the fund, or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will address the possibility of and fallout from cyber-attacks, disruptions, or failures. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund, or other market participants.

For example, the fund relies on various sources to calculate its NAV. Therefore, the fund is subject to certain operational risks associated with reliance on third party service providers and data sources. NAV calculation may be impacted by operational risks arising from factors such as failures in systems and technology. Such failures may result in delays in the calculation of a fund's NAV and/or the inability to calculate NAV over extended time periods. The fund may be unable to recover any losses associated with such failures.

Non-diversification risk. The fund is classified as non-diversified under the Investment Company Act of 1940, as amended. This means that the fund may invest in securities of relatively few issuers. Thus, the performance of one or a small number of portfolio holdings can affect overall performance.

If the fund becomes classified as "diversified" over time and again becomes non-diversified as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track, non-diversification risk would apply.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described below under "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Geographic focus risk. Focusing investments in a single country or few countries, or regions, involves increased political, regulatory and other risks. Market swings in such a targeted country, countries or regions are likely to have a greater effect on fund performance than they would in a more geographically diversified fund.

European investment risk. European financial markets have experienced volatility in recent years and have been adversely affected by concerns about economic downturns, credit rating downgrades, rising government debt level and possible default on or restructuring of government debt in several European countries. A default or debt restructuring by any European country would adversely impact holders of that country's debt, and sellers of credit default swaps linked to that country's creditworthiness. Most countries in Western Europe are members of the European Union (EU), which faces major issues involving its membership, structure, procedures and policies. In June 2016, citizens of the United Kingdom approved a referendum to leave the EU and in March 2017, the United Kingdom initiated its withdrawal from the EU. Significant uncertainty exists regarding the United Kingdom's anticipated withdrawal from the EU and any adverse economic and political effects such withdrawal may have on the United Kingdom, other EU countries and the global economy, which could be significant, potentially resulting in increased volatility and illiquidity and lower economic growth.

European countries are also significantly affected by fiscal and monetary controls implemented by the European Economic and Monetary Union (EMU), and it is possible that the timing and substance of these controls may not address the needs of all EMU member countries. Investing in euro-denominated securities also risks exposure to a currency that may not fully reflect the strengths and weaknesses of the disparate economies that comprise Europe. There is continued concern over member state-level support for the euro, which could lead to certain countries leaving the EMU, the implementation of currency controls, or potentially the dissolution of the euro. The dissolution of the euro could have significant negative effects on European financial markets.

Risks related to investing in Asia. Investment in securities of issuers in Asia involves risks and special considerations not typically associated with investment in the US securities markets. Certain Asian economies have experienced over-extension of credit, currency devaluations and restrictions, high unemployment, high inflation, decreased exports and economic recessions. Economic events in any one Asian country can have a significant effect on the entire Asian region as well as on major trading partners outside Asia, and any adverse effect on some or all of the Asian countries and regions in which the fund invests. The securities markets in some Asian economies are relatively underdeveloped and may subject the fund to higher action costs or greater uncertainty than investments in more developed securities markets. Such risks may adversely affect the value of the fund's investments.

Governments of many Asian countries have implemented significant economic reforms in order to liberalize trade policy, promote foreign investment in their economies,

reduce government control of the economy and develop market mechanisms. There can be no assurance these reforms will continue or that they will be effective. Despite recent reform and privatizations, significant regulation of investment and industry is still pervasive in many Asian countries and may restrict foreign ownership of domestic corporations and repatriation of assets, which may adversely affect fund investments. Governments in some Asian countries are authoritarian in nature, have been installed or removed as a result of military coups or have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection have led to social turmoil, violence and labor unrest in some countries. Unanticipated or sudden political or social developments may result in sudden and significant investment losses. Investing in certain Asian countries involves risk of loss due to expropriation, nationalization, or confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested.

Some countries and regions in which the fund invests have experienced acts of terrorism or strained international relations due to territorial disputes, historical animosities or other defense concerns. For example, North and South Korea each have substantial military capabilities, and historical local tensions between the two countries present the risk of war. Any outbreak of hostilities between the two countries could have a severe adverse effect on the South Korean economy and securities markets. These and other security situations may cause uncertainty in the markets of these geographic areas and may adversely affect the performance of local economies.

Risk of investing in China. Investments in China involve certain risks and special considerations, including the following:

Available disclosure about Chinese companies. Disclosure and regulatory standards in emerging market countries, such as China, are in many respects less stringent than US standards. There is substantially less publicly available information about Chinese issuers than there is about US issuers. Therefore, disclosure of certain material information may not be made, and less information may be available to the fund and other investors than would be the case if the fund's investments were restricted to securities of US issuers. Chinese issuers are subject to accounting, auditing and financial standards and requirements that differ, in some cases significantly, from those applicable to US issuers. In particular, the assets and profits appearing on the financial statements of a Chinese issuer may not reflect its financial position or results of operations in the way they would be reflected had such financial statements been prepared in accordance with US Generally Accepted Accounting Principles.

Chinese corporate and securities law. Legal principles relating to corporate affairs and the validity of corporate procedures, directors' fiduciary duties and liabilities and

stockholders' rights often differ from those that may apply in the US and other countries. Chinese laws providing protection to investors, such as laws regarding the fiduciary duties of officers and directors, are undeveloped and will not provide investors, such as the fund, with protection in all situations where protection would be provided by comparable laws in the US. China lacks a national set of laws that address all issues that may arise with regard to a foreign investor such as the fund. It may therefore be difficult for the fund to enforce its rights as an investor under Chinese corporate and securities laws, and it may be difficult or impossible for the fund to obtain a judgment in court. Moreover, as Chinese corporate and securities laws continue to develop, these developments may adversely affect foreign investors, such as the fund.

Chinese securities markets. The securities markets in China have a limited operating history and are not as developed as those in the US. The markets tend to be smaller in size, have less liquidity and historically have had greater volatility than markets in the US and some other countries. In addition, under normal market conditions, there is less regulation and monitoring of Chinese securities markets and the activities of investors, brokers and other participants than in the US. Accordingly, issuers of securities in China are not subject to the same degree of regulation as are US issuers with respect to such matters as insider trading rules, tender offer regulation, stockholder proxy requirements and the requirements mandating timely disclosure of information. During periods of significant market volatility, the Chinese government has, from time to time, intervened in its domestic securities markets to a greater degree than would be typical in more developed markets, including both direct and indirect market stabilization efforts, which may affect valuations of Chinese issuers. Stock markets in China are in the process of change and further development. This may lead to trading volatility, difficulty in the settlement and recording of transactions and difficulty in interpreting and applying the relevant regulations.

Hong Kong policy. As part of Hong Kong's transition from British to Chinese sovereignty in 1997, China agreed to allow Hong Kong to maintain a high degree of autonomy with regard to its political, legal and economic systems for a period of at least 50 years. China controls matters that relate to defense and foreign affairs. Under the agreement, China does not tax Hong Kong, does not limit the exchange of the Hong Kong dollar for foreign currencies and does not place restrictions on free trade in Hong Kong. However, there is no guarantee that China will continue to honor the agreement, and China may change its policies regarding Hong Kong at any time. Any such change could adversely affect market conditions and the performance of the Chinese economy and, thus, the value of securities in the fund's portfolio.

Inflation. Economic growth in China has historically been accompanied by periods of high inflation. Beginning in 2004, the Chinese government commenced the implementation of various measures to control inflation, which included the tightening of the money supply, the raising of interest rates and more stringent control over certain industries. If these measures are not successful, and if inflation were to steadily increase, the performance of the Chinese economy and the fund's investments could be adversely affected.

Nationalization and expropriation. After the formation of the Chinese socialist state in 1949, the Chinese government renounced various debt obligations and nationalized private assets without providing any form of compensation. There can be no assurance that the Chinese government will not take similar actions in the future. Accordingly, an investment in the fund involves a risk of a total loss.

Political and economic risk. The economy of China, which has been in a state of transition from a planned economy to a more market oriented economy, differs from the economies of most developed countries in many respects, including the level of government involvement, its state of development, its growth rate, control of foreign exchange, and allocation of resources. Although the majority of productive assets in China are still owned by the PRC government at various levels, in recent years, the PRC government has implemented economic reform measures emphasizing utilization of market forces in the development of the economy of China and a high level of management autonomy. The economy of China has experienced significant growth in recent decades, but growth has been uneven both geographically and among various sectors of the economy. Economic growth has also been accompanied by periods of high inflation. The PRC government has implemented various measures from time to time to control inflation and restrain the rate of economic growth.

For several decades, the PRC government has carried out economic reforms to achieve decentralization and utilization of market forces to develop the economy of the PRC. These reforms have resulted in significant economic growth and social progress. However, there can be no assurance that the PRC government will continue to pursue such economic policies or that such policies, if pursued, will be successful. Any adjustment and modification of those economic policies may have an adverse impact on the securities markets in the PRC as well as the constituent securities of the Underlying Index. Further, the PRC government may from time to time adopt corrective measures to control the growth of the PRC economy which may also have an adverse impact on the capital growth and performance of the fund.

Political changes, social instability and adverse diplomatic developments in the PRC could result in the imposition of additional government restrictions including expropriation of assets, confiscatory taxes or nationalization of some or all of the property held by the issuers of the A-Shares in the fund's Underlying Index. The laws, regulations, including the investment regulations, government policies and political and economic climate in China may change with little or no advance notice. Any such change could adversely affect market conditions and the performance of the Chinese economy and, thus, the value of securities in the fund's portfolio.

The Chinese government continues to be an active participant in many economic sectors through ownership positions and regulations. The allocation of resources in China is subject to a high level of government control. The Chinese government strictly regulates the payment of foreign currency denominated obligations and sets monetary policy. Through its policies, the government may provide preferential treatment to particular industries or companies. The policies set by the government could have a substantial effect on the Chinese economy and the fund's investments.

The Chinese economy is export-driven and highly reliant on trade. The performance of the Chinese economy may differ favorably or unfavorably from the US economy in such respects as growth of gross domestic product, rate of inflation, currency depreciation, capital reinvestment, resource self-sufficiency and balance of payments position. Adverse changes to the economic conditions of its primary trading partners, such as the European Union, the US, Hong Kong, the Association of South East Asian Nations, and Japan, would adversely affect the Chinese economy and the fund's investments.

In addition, as much of China's growth over recent decades has been a result of significant investment in substantial export trade, international trade tensions may arise from time to time which can result in trade tariffs, embargoes, trade limitations, trade wars and other negative consequences. The current political climate has intensified concerns about trade tariffs and a potential trade war between China and the US. These consequences may trigger a significant reduction in international trade, the oversupply of certain manufactured goods, substantial price reductions of goods and possible failure of individual companies and/or large segments of China's export industry with a potentially severe negative impact to the fund. In addition, it is possible that the continuation of the current political climate could result in regulatory restrictions being contemplated or imposed in the US or in China that could have a material adverse effect on the fund's ability to invest in accordance with its investment policies and/or achieve its investment objective. Events such as these are difficult to predict and may or may not occur in the future.

China has been transitioning to a market economy since the late seventies, and has only recently opened up to foreign investment and permitted private economic activity. Under the economic reforms implemented by the Chinese government, the Chinese economy has experienced tremendous growth, developing into one of the largest and fastest growing economies in the world. There is no assurance, however, that the Chinese government will not revert to the economic policy of central planning that it implemented prior to 1978 or that such growth will be sustained in the future. Moreover, the current major slowdown in other significant economies of the world, such as the US, the European Union and certain Asian countries, may adversely affect economic growth in China. An economic downturn in China would adversely impact the fund's investments.

Sanctions and embargoes. From time to time, certain of the companies in which the fund expects to invest may operate in, or have dealings with, countries subject to sanctions or embargoes imposed by the US government and the United Nations and/or countries identified by the US government as state sponsors of terrorism. A company may suffer damage to its reputation if it is identified as a company which operates in, or has dealings with, countries subject to sanctions or embargoes imposed by the US government and the United Nations and/or countries identified by the US government as state sponsors of terrorism. As an investor in such companies, the fund will be indirectly subject to those risks.

Risks related to investing in Taiwan. Investments in Taiwanese issuers may subject the fund to legal, regulatory, political, currency and economic risks that are specific to Taiwan. Specifically, Taiwan's geographic proximity and history of political contention with China have resulted in ongoing tensions between the two countries. These tensions may materially affect the Taiwanese economy and its securities market. Taiwan is a small island state with few raw material resources and limited land area and thus it relies heavily on imports for its commodity needs. Any fluctuations or shortages in the commodity markets could have a negative impact on the Taiwanese economy. Also, rising labor costs and increasing environmental consciousness have led some labor-intensive industries to relocate to countries with cheaper work forces, and continued labor outsourcing may adversely affect the Taiwanese economy. Taiwan's economy also is intricately linked with economies of other Asian countries, which are often emerging market economies that often experience overextensions of credit, frequent and pronounced currency fluctuations, devaluations and restrictions, rising unemployment and fluctuations in inflation. Political and social unrest in other Asian countries could cause further economic and market uncertainty in Taiwan. Taiwan's economy is export-oriented, so it depends on an open world trade regime and remains vulnerable to fluctuations in the world economy. In particular, the Taiwanese economy is dependent on the economies of Japan and China, and also the US, and a

reduction in purchases by any of them of Taiwanese products and services or negative changes in their economies would likely have an adverse impact on the Taiwanese economy.

Risks of investing in Hong Kong. The fund's investments which are listed and traded in Hong Kong may expose the fund to certain legal, regulatory, political, currency and economic risks. China is Hong Kong's largest trading partner, both in terms of exports and imports. Any changes in the Chinese economy, trade regulations or currency exchange rates may have an adverse impact on Hong Kong's economy. Hong Kong reverted to Chinese sovereignty on July 1, 1997 as a Special Administrative Region of the People's Republic of China under the principle of "one country, two systems." Although China is obligated to maintain the current capitalist economic and social system of Hong Kong through June 30, 2047, the continuation of economic and social freedoms enjoyed in Hong Kong is dependent on the government of China. There is no guarantee that China will continue to honor Hong Kong's autonomy, and China may change its policies regarding Hong Kong at any time. Any attempt by China to tighten its control over Hong Kong's political, economic or social policies may result in an adverse effect on Hong Kong's economy. Hong Kong is located in a part of the world that has historically been prone to natural disasters such as earthquakes and flooding and is economically sensitive to environmental events. Any such event could result in a significant adverse impact on the Hong Kong economy.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities or a decline in the value of any investments made with cash collateral. These events, and securities lending in general, could trigger adverse tax consequences for the fund and its investors. For example, if the fund loans its securities, the fund and its investors may lose the ability to treat certain fund distributions associated with those securities as qualified dividend income.

Derivatives risk. Derivatives are financial instruments, such as futures and swaps, whose values are based on the value of one or more indicators, such as a security, asset, currency, interest rate, or index. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile and the fund could lose more than the amount it invests. Many derivative transactions are entered into "over-the-counter" (i.e., not on an exchange or contract market);

as a result, the value of such a derivative transaction will depend on the ability and the willingness of the fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the fund's rights as a creditor (e.g., the fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the fund's derivative positions at any time.

Futures risk. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. Depending on the terms of the particular contract, futures contracts are settled through either physical delivery of the underlying instrument on the settlement date or by payment of a cash settlement amount on the settlement date. A decision as to whether, when and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the derivatives risks discussed above, the prices of futures can be highly volatile, using futures can lower total return and the potential loss from futures can exceed the fund's initial investment in such contracts.

Xtrackers MSCI EAFE ESG Leaders Equity ETF

INVESTMENT OBJECTIVE

Xtrackers MSCI EAFE ESG Leaders Equity ETF (the "fund"), seeks investment results that correspond generally to the performance, before fees and expenses, of the MSCI EAFE ESG Leaders Index (the "Underlying Index").

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a "passive" or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is a capitalization weighted index that provides exposure to companies with high environmental, social and governance ("ESG") performance relative to their sector peers. The Underlying Index consists of large- and medium-capitalization companies across developed markets countries, excluding Canada and the United States. The annual review of the Underlying Index takes place in May and it is rebalanced in August, November and February; the fund updates and rebalances its portfolio in a corresponding fashion.

The Underlying Index uses MSCI ESG Ratings, MSCI ESG Controversies and MSCI Business Involvement Screening Research (collectively, "MSCI ESG Research") to determine index components for the Underlying Index.

■ MSCI ESG Ratings provides research, analysis and ratings of how well companies manage their ESG risks and opportunities. MSCI ESG Ratings provides a company with an overall ESG rating on a seven point scale, ranging from 'AAA' to 'CCC.' Existing constituents of the Underlying Index are required to have an MSCI ESG rating of BB or above to remain in the index, and companies that are currently not constituents of the Underlying Index are also required to have an MSCI ESG rating of BB or above to be considered eligible for addition.

■ MSCI ESG Controversies provides assessments of controversies concerning the negative ESG impact of company operations, products and services. MSCI ESG Controversies score companies on a scale of 0 to 10, with 0 being the most severe controversy. Existing constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 1 or above to remain in the index, while companies that are currently not constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 3 or above to be considered eligible for addition.

■ MSCI ESG Business Involvement Screening Research aims to enable institutional investors to manage ESG standards and restrictions reliably and efficiently. Companies that are involved in specific business activities which have high potential for negative social and/or environmental impact, such as alcohol, gambling, tobacco, nuclear power, conventional weapons, nuclear weapons, controversial weapons and civilian firearms, are ineligible for inclusion.

The fund uses a full replication indexing strategy to seek to track the Underlying Index. As such, the fund invests directly in the component securities (or a substantial number of the component securities) of the Underlying Index in substantially the same weightings in which they are represented in the Underlying Index. If it is not possible for the fund to acquire component securities due to limited availability or regulatory restrictions, the fund may use a representative sampling indexing strategy to seek to track the Underlying Index instead of a full replication indexing strategy. "Representative sampling" is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield), and liquidity measures similar to those of the Underlying Index. The fund may or may not hold all of the securities in the Underlying Index when using a representative sampling indexing strategy. The fund will invest at least 80% of its total assets (but typically far more) in component securities (including depositary receipts in respect of such securities) of the Underlying Index.

As of October 31, 2019, the Underlying Index consisted of 435 securities, with an average market capitalization of approximately \$16.6 billion and a minimum market capitalization of approximately \$1.3 billion, from issuers in the following countries: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland and the United Kingdom. The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in equity securities of issuers from Europe, Australia and the Far East. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of securities of issuers from Japan (24.1%).

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of issuers in the financial services sector (19.4%). The financial services sector includes companies involved in banking, consumer finance, asset management and custody banks, as well as investment banking and brokerage and insurance. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

While the fund is currently classified as "non-diversified" under the Investment Company Act of 1940, it may operate as or become classified as "diversified" over time. The fund could again become non-diversified solely as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track. Shareholder approval will not be sought when the fund crosses from diversified to non-diversified status under such circumstances.

The fund may invest its remaining assets in other securities, including securities not in the Underlying Index, cash and cash equivalents, money market instruments, such as repurchase agreements or money market funds (including money market funds advised by the Advisor or its affiliates (subject to applicable limitations under the 1940 Act), or exemptions therefrom), convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index) and in futures contracts, options on futures contracts and other types of options and swaps related to its Underlying Index. The fund will not use futures and options for speculative purposes.

The fund may also invest in depositary receipts in respect of equity securities that comprise its Underlying Index to seek performance that corresponds to the fund's respective Underlying Index. Investments in such depositary

receipts will count towards the fund's 80% investment policy discussed above with respect to instruments that comprise the fund's Underlying Index.

The fund expects to use futures contracts to a limited extent in seeking performance that corresponds to its Underlying Index.

The fund or securities referred to herein are not sponsored, endorsed, issued, sold or promoted by MSCI, and MSCI bears no liability with respect to any the fund or securities or any index on which the fund or securities are based. The Prospectus contains a more detailed description of the limited relationship MSCI has with DBX Advisors LLC and any related funds.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

Underlying Index Information

MSCI EAFE ESG Leaders Index

Number of Components: approximately 435

Index Description. The MSCI EAFE ESG Leaders Index is a capitalization weighted index that provides exposure to companies with high environmental, social and governance ("ESG") performance relative to their sector peers. The Underlying Index consists of large- and medium-capitalization companies across developed markets countries, excluding Canada and the United States. The country pool consists of the following set of countries: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the United Kingdom.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective.

ESG investment strategy risk. The Underlying Index's ESG methodology, and thus the fund's investment strategy, limits the types and number of investment opportunities available to the fund and, as a result, the fund may underperform other funds that do not have an ESG focus. The Underlying Index's ESG methodology may result in the fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the index

provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

Stock market risk. When stock prices fall, you should expect the value of your investment to fall as well. Stock prices can be hurt by poor management on the part of the stock's issuer, shrinking product demand and other business risks. These may affect single companies as well as groups of companies. The market as a whole may not favor the types of investments the fund makes, which could adversely affect a stock's price, regardless of how well the company performs, or the fund's ability to sell a stock at an attractive price. There is a chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising and falling prices. Events in the US and global financial markets, including actions taken by the US Federal Reserve or foreign central banks to stimulate or stabilize economic growth, may at times result in unusually high market volatility which could negatively affect performance. Further, geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes and related geopolitical events have led, and in the future may lead, to increased short-term market volatility, which may disrupt securities markets and have adverse long-term effects on US and world economies and markets. To the extent that the fund invests in a particular geographic region, capitalization or sector, the fund's performance may be affected by the general performance of that region, capitalization or sector.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund's investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets. To the extent that the fund invests in non-US dollar denominated foreign securities, changes in currency exchange rates may affect the US dollar value of foreign securities or the income or gain received on these securities.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain

situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments.

Depository receipt risk. Foreign investments in American Depository Receipts and other depository receipts may be less liquid than the underlying shares in their primary trading market. Certain of the depository receipts in which the fund invests may be unsponsored depository receipts. Unsponsored depository receipts may not provide as much information about the underlying issuer and may not carry the same voting privileges as sponsored depository receipts. Unsponsored depository receipts are issued by one or more depositaries in response to market demand, but without a formal agreement with the company that issues the underlying securities.

Currency risk. Changes in currency exchange rates and the relative value of non-US currencies may affect the value of the fund's investment and the value of your fund shares. Because the fund's NAV is determined on the basis of the US dollar, investors may lose money if the foreign currency depreciates against the US dollar, even if the foreign currency value of the fund's holdings in that market increases. Conversely, the dollar value of your investment in the fund may go up if the value of the foreign currency appreciates against the US dollar. The value of the US dollar measured against other currencies is influenced by a variety of factors. These factors include: interest rates, national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates. Currency exchange rates can be very volatile and can change quickly and unpredictably. Therefore, the value of an investment in the fund may also go up or down quickly and unpredictably and investors may lose money.

Medium-sized company risk. Medium-sized company stocks tend to be more volatile than large company stocks. Because stock analysts are less likely to follow medium-sized companies, less information about them is available to investors. Industry-wide reversals may have a greater impact on medium-sized companies, since they lack the financial resources of larger companies. Medium-sized company stocks are typically less liquid than large company stocks.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not

trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in circumstances where redemptions from the fund may be higher than normal.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Financial services sector risk. To the extent that the fund invests significantly in the financial services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the financial services sector. The financial services sector is subject to extensive government regulation, can be subject to relatively rapid change due to increasingly blurred distinctions between service segments, and can be significantly affected by availability and cost of capital funds, changes in interest rates, the rate of corporate and consumer debt defaults, and price competition. In addition, the deterioration of the credit markets in 2007 and the ensuing financial crisis in 2008 resulted in an unusually high degree of volatility in the financial markets for an extended period of time, the effects of which may persist indefinitely.

Numerous financial services companies have experienced substantial declines in the valuations of their assets, taken action to raise capital (such as the issuance of debt or equity securities), or even ceased operations. These actions have caused the securities of many financial services companies to experience a dramatic decline in value. Moreover, certain financial companies have avoided collapse due to intervention by governmental regulatory authorities, but such interventions have often not averted a substantial decline in the value of such companies' common stock. Issuers that have exposure to the real estate, mortgage and credit markets have been particularly affected by the foregoing events and the general market turmoil, and it is uncertain whether or for how long these conditions will continue.

Indexing risk. While the exposure of an index to its component securities is by definition 100%, the fund's effective exposure to index securities may vary over time. Because

an index fund is designed to maintain a high level of exposure to its Underlying Index at all times, it will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Tracking error risk. The performance of the fund may diverge from that of its Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. In addition, to the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index) it may cause the fund to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to legal restrictions or limitations imposed by the governments of certain countries, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other regulatory reasons. To the extent the fund calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

The need to comply with the tax diversification and other requirements of the Internal Revenue Code may also impact the fund's ability to replicate the performance of its Underlying Index. In addition, if the fund utilizes derivative instruments or holds other instruments that are not

included in its Underlying Index, its return may not correlate as well with the returns of its Underlying Index as would be the case if the fund purchased all the securities in its Underlying Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from NAV during periods of market volatility. Differences between secondary market prices and the value of the fund's holdings may be due largely to supply and demand forces in the secondary market, which may not be the same forces as those influencing prices for securities held by the fund at a particular time. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units, the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. In addition, there may be times when the market price and the value of the fund's holdings vary significantly and you may pay more than the value of the fund's holdings when buying shares on the secondary market, and you may receive less than the value of the fund's holdings when you sell those shares. While the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in trading prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. If market makers exit the business or are unable to continue making markets in fund's shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). The market price of shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialist, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that shares may trade at a discount to the fund's NAV, and the discount is likely to be greatest when the price of shares is falling fastest, which may be the time that you most want to sell your shares. There are various methods by which investors can purchase and sell shares of the funds and various orders that may be placed. Investors should consult their financial intermediary before purchasing or selling shares of the fund.

In addition, the securities held by the fund may be traded in markets that close at a different time than an exchange. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when an exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. More generally, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The bid-ask spread varies over time for shares of the fund based on the fund's trading volume and market liquidity, and is generally lower if the fund has substantial trading volume and market liquidity, and higher if the fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size). The fund's bid-ask spread may also be impacted by the liquidity of the underlying securities held by the fund, particularly for newly launched or smaller funds or in instances of significant volatility of the underlying securities. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on an exchange and may, therefore, have a material effect on the market price of the fund's shares.

Valuation risk. Because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Operational risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations.

Cyber-attacks may include unauthorized attempts by third parties to improperly access, modify, disrupt the operations of, or prevent access to the systems of the fund's service providers or counterparties, issuers of securities held by the fund or other market participants or data within them. In addition, power or communications outages, acts of god, information technology equipment malfunctions, operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data. Market events also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

Cyber-attacks, disruptions, or failures may adversely affect the fund and its shareholders or cause reputational damage and subject the fund to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted, and operations may be disrupted (e.g., cyber-attacks or operational failures may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value, and impede trading). In addition, cyber-attacks, disruptions, or failures involving a fund counterparty could affect such counterparty's ability to meet its obligations to the fund, which may result in losses to the fund and its shareholders. Similar types of operational and technology risks are also present for issuers of securities held by the fund, which could have material adverse consequences for such issuers, and may cause the fund's investments to lose value. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions, or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund, or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will address the possibility of and fallout from cyber-attacks, disruptions, or failures. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund, or other market participants.

For example, the fund relies on various sources to calculate its NAV. Therefore, the fund is subject to certain operational risks associated with reliance on third party service providers and data sources. NAV calculation may be impacted by operational risks arising from factors such as failures in systems and technology. Such failures may result in delays in the calculation of a fund's NAV and/or the inability to calculate NAV over extended time periods. The fund may be unable to recover any losses associated with such failures.

Non-diversification risk. The fund is classified as non-diversified under the Investment Company Act of 1940, as amended. This means that the fund may invest in

securities of relatively few issuers. Thus, the performance of one or a small number of portfolio holdings can affect overall performance.

If the fund becomes classified as "diversified" over time and again becomes non-diversified as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track, non-diversification risk would apply.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described below under "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Geographic focus risk. Focusing investments in a single country or few countries, or regions, involves increased political, regulatory and other risks. Market swings in such a targeted country, countries or regions are likely to have a greater effect on fund performance than they would in a more geographically diversified fund.

European investment risk. European financial markets have experienced volatility in recent years and have been adversely affected by concerns about economic downturns, credit rating downgrades, rising government debt level and possible default on or restructuring of government debt in several European countries. A default or debt restructuring by any European country would adversely impact holders of that country's debt, and sellers of credit default swaps linked to that country's creditworthiness. Most countries in Western Europe are members of the European Union (EU), which faces major issues involving its membership, structure, procedures and policies. In June 2016, citizens of the United Kingdom approved a referendum to leave the EU and in March 2017, the United Kingdom initiated its withdrawal from the EU. Significant uncertainty exists regarding the United Kingdom's anticipated withdrawal from the EU and any adverse economic and political effects such withdrawal may have on the United Kingdom, other EU countries and the global economy, which could be significant, potentially resulting in increased volatility and illiquidity and lower economic growth.

European countries are also significantly affected by fiscal and monetary controls implemented by the European Economic and Monetary Union (EMU), and it is possible that the timing and substance of these controls may not address the needs of all EMU member countries. Investing

in euro-denominated securities also risks exposure to a currency that may not fully reflect the strengths and weaknesses of the disparate economies that comprise Europe. There is continued concern over member state-level support for the euro, which could lead to certain countries leaving the EMU, the implementation of currency controls, or potentially the dissolution of the euro. The dissolution of the euro could have significant negative effects on European financial markets.

Risks related to investing in Asia. Investment in securities of issuers in Asia involves risks and special considerations not typically associated with investment in the US securities markets. Certain Asian economies have experienced over-extension of credit, currency devaluations and restrictions, high unemployment, high inflation, decreased exports and economic recessions. Economic events in any one Asian country can have a significant effect on the entire Asian region as well as on major trading partners outside Asia, and any adverse effect on some or all of the Asian countries and regions in which the fund invests. The securities markets in some Asian economies are relatively underdeveloped and may subject the fund to higher action costs or greater uncertainty than investments in more developed securities markets. Such risks may adversely affect the value of the fund's investments.

Governments of many Asian countries have implemented significant economic reforms in order to liberalize trade policy, promote foreign investment in their economies, reduce government control of the economy and develop market mechanisms. There can be no assurance these reforms will continue or that they will be effective. Despite recent reform and privatizations, significant regulation of investment and industry is still pervasive in many Asian countries and may restrict foreign ownership of domestic corporations and repatriation of assets, which may adversely affect fund investments. Governments in some Asian countries are authoritarian in nature, have been installed or removed as a result of military coups or have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection have led to social turmoil, violence and labor unrest in some countries. Unanticipated or sudden political or social developments may result in sudden and significant investment losses. Investing in certain Asian countries involves risk of loss due to expropriation, nationalization, or confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested.

Some countries and regions in which the fund invests have experienced acts of terrorism or strained international relations due to territorial disputes, historical animosities or other defense concerns. For example, North and South Korea each have substantial military capabilities, and historical local tensions between the two countries present the risk of war. Any outbreak of hostilities between

the two countries could have a severe adverse effect on the South Korean economy and securities markets. These and other security situations may cause uncertainty in the markets of these geographic areas and may adversely affect the performance of local economies.

Risks related to investing in Japan. The growth of Japan's economy has historically lagged behind that of its Asian neighbors and other major developed economies. The Japanese economy is heavily dependent on international trade and has been adversely affected by trade tariffs, other protectionist measures, competition from emerging economies and the economic conditions of its trading partners. Japan's relations with its neighbors, particularly China, North Korea, South Korea and Russia, have at times been strained due to territorial disputes, historical animosities and defense concerns. Most recently, the Japanese government has shown concern over the increased nuclear and military activity by North Korea. Strained relations may cause uncertainty in the Japanese markets and adversely affect the overall Japanese economy in times of crisis. China has become an important trading partner with Japan, yet the countries' political relationship has become strained. Should political tension increase, it could adversely affect the economy, especially the export sector, and destabilize the region as a whole. Japan is located in a part of the world that has historically been prone to natural disasters such as earthquakes, volcanoes and tsunamis and is economically sensitive to environmental events. Any such event, such as the major earthquake and tsunami which struck Japan in March 2011, could result in a significant adverse impact on the Japanese economy. Japan also remains heavily dependent on oil imports, and higher commodity prices could therefore have a negative impact on the economy. Furthermore, Japanese corporations often engage in high levels of corporate leveraging, extensive cross-purchases of the securities of other corporations and are subject to a changing corporate governance structure. Japan may be subject to risks relating to political, economic and labor risks. Any of these risks, individually or in the aggregate, could adversely affect investments in the fund.

Historically, Japan has been subject to unpredictable national politics and may experience frequent political turnover. Future political developments may lead to changes in policy that might adversely affect the fund's investments. In addition, the Japanese economy faces several concerns, including a financial system with large levels of nonperforming loans, over-leveraged corporate balance sheets, extensive cross-ownership by major corporations, a changing corporate governance structure, and large government deficits. The Japanese yen has fluctuated widely at times and any increase in its value may cause a decline in exports that could weaken the economy. Furthermore, Japan has an aging workforce. It is a labor market undergoing fundamental structural changes, as traditional

lifetime employment clashes with the need for increased labor mobility, which may adversely affect Japan's economic competitiveness.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities or a decline in the value of any investments made with cash collateral. These events, and securities lending in general, could trigger adverse tax consequences for the fund and its investors. For example, if the fund loans its securities, the fund and its investors may lose the ability to treat certain fund distributions associated with those securities as qualified dividend income.

Derivatives risk. Derivatives are financial instruments, such as futures and swaps, whose values are based on the value of one or more indicators, such as a security, asset, currency, interest rate, or index. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile and the fund could lose more than the amount it invests. Many derivative transactions are entered into "over-the-counter" (i.e., not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of the fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the fund's rights as a creditor (e.g., the fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the fund's derivative positions at any time.

Futures risk. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. Depending on the terms of the particular contract, futures contracts are settled through either physical delivery of the underlying instrument on the settlement date or by payment of a cash settlement amount on the settlement date. A decision as to whether, when and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the derivatives risks discussed above, the prices of futures can be highly volatile, using futures can lower total return and the potential loss from futures can exceed the fund's initial investment in such contracts.

INVESTMENT OBJECTIVE

Xtrackers MSCI ACWI ex USA ESG Leaders Equity ETF (the "fund"), seeks investment results that correspond generally to the performance, before fees and expenses, of the MSCI ACWI ex USA ESG Leaders Index (the "Underlying Index").

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a "passive" or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is a capitalization weighted index that provides exposure to companies with high environmental, social and governance ("ESG") performance relative to their sector peers. The Underlying Index is constructed using regional indexes that provide exposure to large- and medium-capitalization companies from developed and emerging markets countries (excluding the United States). The annual review of the Underlying Index takes place in May and it is rebalanced in August, November and February; the fund updates and rebalances its portfolio in a corresponding fashion.

The Underlying Index uses MSCI ESG Ratings, MSCI ESG Controversies and MSCI Business Involvement Screening Research (collectively, "MSCI ESG Research") to determine index components for the Underlying Index.

- MSCI ESG Ratings provides research, analysis and ratings of how well companies manage their ESG risks and opportunities. MSCI ESG Ratings provides a company with an overall ESG rating on a seven point scale, ranging from 'AAA' to 'CCC'. Existing constituents of the Underlying Index are required to have an MSCI ESG rating of BB or above to remain in the index, and companies that are currently not constituents of the Underlying Index are also required to have an MSCI ESG rating of BB or above to be considered eligible for addition.
- MSCI ESG Controversies provides assessments of controversies concerning the negative ESG impact of company operations, products and services. MSCI ESG Controversies score companies on a scale of 0 to 10, with 0 being the most severe controversy. Existing constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 1 or above to remain in the index, while companies that are currently not constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 3 or above to be considered eligible for addition.
- MSCI ESG Business Involvement Screening Research aims to enable institutional investors to manage ESG standards and restrictions reliably and efficiently. Companies that are involved in specific business activities which have high potential for negative social and/or environmental

impact, such as alcohol, gambling, tobacco, nuclear power, conventional weapons, nuclear weapons, controversial weapons and civilian firearms, are ineligible for inclusion.

The fund uses a full replication indexing strategy to seek to track the Underlying Index. As such, the fund invests directly in the component securities (or a substantial number of the component securities) of the Underlying Index in substantially the same weightings in which they are represented in the Underlying Index. If it is not possible for the fund to acquire component securities due to limited availability or regulatory restrictions, the fund may use a representative sampling indexing strategy to seek to track the Underlying Index instead of a full replication indexing strategy. "Representative sampling" is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield), and liquidity measures similar to those of the Underlying Index. The fund may or may not hold all of the securities in the Underlying Index when using a representative sampling indexing strategy. The fund will invest at least 80% of its total assets (but typically far more) in component securities (including depositary receipts in respect of such securities) of the Underlying Index.

As of October 31, 2019, the Underlying Index consisted of 911 securities, with an average market capitalization of approximately \$11.9 billion and a minimum market capitalization of approximately \$79 million from issuers in the following countries: Argentina, Austria, Australia, Belgium, Brazil, Canada, Chile, China, Colombia, Czech Republic, Denmark, Egypt, Finland, France, Germany, Greece, Hong Kong, Hungary, India, Indonesia, Ireland, Israel, Italy, Japan, Korea, Malaysia, Mexico, the Netherlands, New Zealand, Norway, Pakistan, Peru, Philippines, Poland, Portugal, Qatar, Russia, Saudi Arabia, Singapore, South Africa, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, the United Arab Emirates and the United Kingdom. The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in equity securities from countries other than the United States. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of securities of issuers from Japan (16.1%).

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of issuers in the financial services sector (22.2%). The financial services sector includes companies involved in banking, consumer finance, asset management and custody banks, as well as investment banking and

brokerage and insurance. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

While the fund is currently classified as "non-diversified" under the Investment Company Act of 1940, it may operate as or become classified as "diversified" over time. The fund could again become non-diversified solely as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track. Shareholder approval will not be sought when the fund crosses from diversified to non-diversified status under such circumstances.

The fund may invest its remaining assets in other securities, including securities not in the Underlying Index, cash and cash equivalents, money market instruments, such as repurchase agreements or money market funds (including money market funds advised by the Advisor or its affiliates (subject to applicable limitations under the 1940 Act), or exemptions therefrom), convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index) and in futures contracts, options on futures contracts and other types of options and swaps related to its Underlying Index. The fund will not use futures and options for speculative purposes.

The fund may also invest in depositary receipts in respect of equity securities that comprise its Underlying Index to seek performance that corresponds to the fund's respective Underlying Index. Investments in such depositary receipts will count towards the fund's 80% investment policy discussed above with respect to instruments that comprise the fund's Underlying Index.

The fund expects to use futures contracts to a limited extent in seeking performance that corresponds to its Underlying Index.

The fund or securities referred to herein are not sponsored, endorsed, issued, sold or promoted by MSCI, and MSCI bears no liability with respect to any the fund or securities or any index on which the fund or securities are based. The Prospectus contains a more detailed description of the limited relationship MSCI has with DBX Advisors LLC and any related funds.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

Underlying Index Information

MSCI ACWI ex USA ESG Leaders Index

Number of Components: approximately 911

Index Description. The MSCI ACWI ex USA ESG Leaders Index is a capitalization weighted index that provides exposure to companies with high environmental, social and governance (“ESG”) performance relative to their sector peers. The Underlying Index is constructed using regional indexes that provide exposure to large- and medium-capitalization companies from developed and emerging markets countries (excluding the United States). The country pool consists of the following set of countries: Argentina, Austria, Australia, Belgium, Brazil, Canada, Chile, China, Colombia, Czech Republic, Denmark, Egypt, Finland, France, Germany, Greece, Hong Kong, Hungary, India, Indonesia, Ireland, Israel, Italy, Japan, Korea, Malaysia, Mexico, the Netherlands, New Zealand, Norway, Pakistan, Peru, Philippines, Poland, Portugal, Qatar, Russia, Saudi Arabia, Singapore, South Africa, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, the United Arab Emirates and the United Kingdom.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund’s performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund’s net asset value (“NAV”), trading price, yield, total return and ability to meet its investment objective.

ESG investment strategy risk. The Underlying Index’s ESG methodology, and thus the fund’s investment strategy, limits the types and number of investment opportunities available to the fund and, as a result, the fund may underperform other funds that do not have an ESG focus. The Underlying Index’s ESG methodology may result in the fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the index provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

Stock market risk. When stock prices fall, you should expect the value of your investment to fall as well. Stock prices can be hurt by poor management on the part of the stock’s issuer, shrinking product demand and other business risks. These may affect single companies as well as groups of companies. The market as a whole may not favor the types of investments the fund makes, which could adversely affect a stock’s price, regardless of how well the company performs, or the fund’s ability to sell a stock at an attractive price. There is a chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising and falling prices. Events in the US and global financial markets, including actions taken by the US Federal Reserve or foreign central banks to stimulate or stabilize economic growth, may at times result in unusually high market volatility which could negatively affect performance. Further, geopolitical and other

events, including war, terrorism, economic uncertainty, trade disputes and related geopolitical events have led, and in the future may lead, to increased short-term market volatility, which may disrupt securities markets and have adverse long-term effects on US and world economies and markets. To the extent that the fund invests in a particular geographic region, capitalization or sector, the fund’s performance may be affected by the general performance of that region, capitalization or sector.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund’s investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets. To the extent that the fund invests in non-US dollar denominated foreign securities, changes in currency exchange rates may affect the US dollar value of foreign securities or the income or gain received on these securities.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management’s estimate of its value. For the same reason, it may at times be difficult to value the fund’s foreign investments.

Depository receipt risk. Foreign investments in American Depository Receipts and other depository receipts may be less liquid than the underlying shares in their primary trading market. Certain of the depository receipts in which the fund invests may be unsponsored depository receipts. Unsponsored depository receipts may not provide as much information about the underlying issuer and may not carry the same voting privileges as sponsored depository receipts. Unsponsored depository receipts are issued by one or more depositories in response to market demand, but without a formal agreement with the company that issues the underlying securities.

Currency risk. Changes in currency exchange rates and the relative value of non-US currencies may affect the value of the fund’s investment and the value of your fund

shares. Because the fund's NAV is determined on the basis of the US dollar, investors may lose money if the foreign currency depreciates against the US dollar, even if the foreign currency value of the fund's holdings in that market increases. Conversely, the dollar value of your investment in the fund may go up if the value of the foreign currency appreciates against the US dollar. The value of the US dollar measured against other currencies is influenced by a variety of factors. These factors include: interest rates, national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates. Currency exchange rates can be very volatile and can change quickly and unpredictably. Therefore, the value of an investment in the fund may also go up or down quickly and unpredictably and investors may lose money.

Emerging market securities risk. Investment in emerging markets subjects the fund to a greater risk of loss than investments in a developed market. This is due to, among other things, (i) greater market volatility, (ii) lower trading volume, (iii) political and economic instability, (iv) high levels of inflation, deflation or currency devaluation, (v) greater risk of market shut down, (vi) more governmental limitations on foreign investments and limitations on repatriation of invested capital than those typically found in a developed market, and (vii) the risk that companies may be held to lower disclosure, corporate governance, auditing and financial reporting standards than companies in more developed markets.

The financial stability of issuers (including governments) in emerging market countries may be more precarious than in other countries. As a result, there will tend to be an increased risk of price volatility in the fund's investments in emerging market countries, which may be magnified by currency fluctuations relative to the US dollar.

Settlement practices for transactions in foreign markets may differ from those in US markets. Such differences include delays beyond periods customary in the US and practices, such as delivery of securities prior to receipt of payment, which increase the likelihood of a "failed settlement." Failed settlements can result in losses to the fund. Low trading volumes and volatile prices in less developed markets make trades harder to complete and settle, and governments or trade groups may compel local agents to hold securities in designated depositories that are not subject to independent evaluation. Local agents are held only to the standards of care of their local markets.

Medium-sized company risk. Medium-sized company stocks tend to be more volatile than large company stocks. Because stock analysts are less likely to follow medium-sized companies, less information about them is available to investors. Industry-wide reversals may have a greater impact on medium-sized companies, since they lack the financial resources of larger companies. Medium-sized company stocks are typically less liquid than large company stocks.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in circumstances where redemptions from the fund may be higher than normal.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Financial services sector risk. To the extent that the fund invests significantly in the financial services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the financial services sector. The financial services sector is subject to extensive government regulation, can be subject to relatively rapid change due to increasingly blurred distinctions between service segments, and can be significantly affected by availability and cost of capital funds, changes in interest rates, the rate of corporate and consumer debt defaults, and price competition. In addition, the deterioration of the credit markets in 2007 and the ensuing financial crisis in 2008 resulted in an unusually high degree of volatility in the financial markets for an extended period of time, the effects of which may persist indefinitely.

Numerous financial services companies have experienced substantial declines in the valuations of their assets, taken action to raise capital (such as the issuance of debt or equity securities), or even ceased operations. These actions have caused the securities of many financial services companies to experience a dramatic decline in value. Moreover, certain financial companies have avoided

collapse due to intervention by governmental regulatory authorities, but such interventions have often not averted a substantial decline in the value of such companies' common stock. Issuers that have exposure to the real estate, mortgage and credit markets have been particularly affected by the foregoing events and the general market turmoil, and it is uncertain whether or for how long these conditions will continue.

Indexing risk. While the exposure of an index to its component securities is by definition 100%, the fund's effective exposure to index securities may vary over time. Because an index fund is designed to maintain a high level of exposure to its Underlying Index at all times, it will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Tracking error risk. The performance of the fund may diverge from that of its Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. In addition, to the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index) it may cause the fund to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to legal restrictions or limitations imposed by the governments of certain countries, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other regulatory reasons. To the extent the fund calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the

Underlying Index may be adversely affected. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

The need to comply with the tax diversification and other requirements of the Internal Revenue Code may also impact the fund's ability to replicate the performance of its Underlying Index. In addition, if the fund utilizes derivative instruments or holds other instruments that are not included in its Underlying Index, its return may not correlate as well with the returns of its Underlying Index as would be the case if the fund purchased all the securities in its Underlying Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from NAV during periods of market volatility. Differences between secondary market prices and the value of the fund's holdings may be due largely to supply and demand forces in the secondary market, which may not be the same forces as those influencing prices for securities held by the fund at a particular time. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units, the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. In addition, there may be times when the market price and the value of the fund's holdings vary significantly and you may pay more than the value of the fund's holdings when buying shares on the secondary market, and you may receive less than the value of the fund's holdings when you sell those shares. While the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in trading prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. If market makers exit the business or are unable to continue making markets in fund's shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). The market price of shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialist, market makers or

other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that shares may trade at a discount to the fund's NAV, and the discount is likely to be greatest when the price of shares is falling fastest, which may be the time that you most want to sell your shares. There are various methods by which investors can purchase and sell shares of the funds and various orders that may be placed. Investors should consult their financial intermediary before purchasing or selling shares of the fund.

In addition, the securities held by the fund may be traded in markets that close at a different time than an exchange. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when an exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. More generally, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The bid-ask spread varies over time for shares of the fund based on the fund's trading volume and market liquidity, and is generally lower if the fund has substantial trading volume and market liquidity, and higher if the fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size). The fund's bid-ask spread may also be impacted by the liquidity of the underlying securities held by the fund, particularly for newly launched or smaller funds or in instances of significant volatility of the underlying securities. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on an exchange and may, therefore, have a material effect on the market price of the fund's shares.

Valuation risk. Because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Operational risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations.

Cyber-attacks may include unauthorized attempts by third parties to improperly access, modify, disrupt the operations of, or prevent access to the systems of the fund's service providers or counterparties, issuers of securities

held by the fund or other market participants or data within them. In addition, power or communications outages, acts of god, information technology equipment malfunctions, operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data. Market events also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

Cyber-attacks, disruptions, or failures may adversely affect the fund and its shareholders or cause reputational damage and subject the fund to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted, and operations may be disrupted (e.g., cyber-attacks or operational failures may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value, and impede trading). In addition, cyber-attacks, disruptions, or failures involving a fund counterparty could affect such counterparty's ability to meet its obligations to the fund, which may result in losses to the fund and its shareholders. Similar types of operational and technology risks are also present for issuers of securities held by the fund, which could have material adverse consequences for such issuers, and may cause the fund's investments to lose value. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions, or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund, or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will address the possibility of and fallout from cyber-attacks, disruptions, or failures. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund, or other market participants.

For example, the fund relies on various sources to calculate its NAV. Therefore, the fund is subject to certain operational risks associated with reliance on third party service providers and data sources. NAV calculation may

be impacted by operational risks arising from factors such as failures in systems and technology. Such failures may result in delays in the calculation of a fund's NAV and/or the inability to calculate NAV over extended time periods. The fund may be unable to recover any losses associated with such failures.

Non-diversification risk. The fund is classified as non-diversified under the Investment Company Act of 1940, as amended. This means that the fund may invest in securities of relatively few issuers. Thus, the performance of one or a small number of portfolio holdings can affect overall performance.

If the fund becomes classified as "diversified" over time and again becomes non-diversified as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track, non-diversification risk would apply.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described below under "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Geographic focus risk. Focusing investments in a single country or few countries, or regions, involves increased political, regulatory and other risks. Market swings in such a targeted country, countries or regions are likely to have a greater effect on fund performance than they would in a more geographically diversified fund.

European investment risk. European financial markets have experienced volatility in recent years and have been adversely affected by concerns about economic downturns, credit rating downgrades, rising government debt level and possible default on or restructuring of government debt in several European countries. A default or debt restructuring by any European country would adversely impact holders of that country's debt, and sellers of credit default swaps linked to that country's creditworthiness. Most countries in Western Europe are members of the European Union (EU), which faces major issues involving its membership, structure, procedures and policies. In June 2016, citizens of the United Kingdom approved a referendum to leave the EU and in March 2017, the United Kingdom initiated its withdrawal from the EU. Significant uncertainty exists regarding the United Kingdom's anticipated withdrawal from the EU and any adverse economic and political effects such withdrawal may have on the

United Kingdom, other EU countries and the global economy, which could be significant, potentially resulting in increased volatility and illiquidity and lower economic growth.

European countries are also significantly affected by fiscal and monetary controls implemented by the European Economic and Monetary Union (EMU), and it is possible that the timing and substance of these controls may not address the needs of all EMU member countries. Investing in euro-denominated securities also risks exposure to a currency that may not fully reflect the strengths and weaknesses of the disparate economies that comprise Europe. There is continued concern over member state-level support for the euro, which could lead to certain countries leaving the EMU, the implementation of currency controls, or potentially the dissolution of the euro. The dissolution of the euro could have significant negative effects on European financial markets.

Risks related to investing in Asia. Investment in securities of issuers in Asia involves risks and special considerations not typically associated with investment in the US securities markets. Certain Asian economies have experienced over-extension of credit, currency devaluations and restrictions, high unemployment, high inflation, decreased exports and economic recessions. Economic events in any one Asian country can have a significant effect on the entire Asian region as well as on major trading partners outside Asia, and any adverse effect on some or all of the Asian countries and regions in which the fund invests. The securities markets in some Asian economies are relatively underdeveloped and may subject the fund to higher action costs or greater uncertainty than investments in more developed securities markets. Such risks may adversely affect the value of the fund's investments.

Governments of many Asian countries have implemented significant economic reforms in order to liberalize trade policy, promote foreign investment in their economies, reduce government control of the economy and develop market mechanisms. There can be no assurance these reforms will continue or that they will be effective. Despite recent reform and privatizations, significant regulation of investment and industry is still pervasive in many Asian countries and may restrict foreign ownership of domestic corporations and repatriation of assets, which may adversely affect fund investments. Governments in some Asian countries are authoritarian in nature, have been installed or removed as a result of military coups or have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection have led to social turmoil, violence and labor unrest in some countries. Unanticipated or sudden political or social developments may result in sudden and significant investment losses. Investing in certain Asian countries involves risk of loss

due to expropriation, nationalization, or confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested.

Some countries and regions in which the fund invests have experienced acts of terrorism or strained international relations due to territorial disputes, historical animosities or other defense concerns. For example, North and South Korea each have substantial military capabilities, and historical local tensions between the two countries present the risk of war. Any outbreak of hostilities between the two countries could have a severe adverse effect on the South Korean economy and securities markets. These and other security situations may cause uncertainty in the markets of these geographic areas and may adversely affect the performance of local economies.

Risks related to investing in Japan. The growth of Japan's economy has historically lagged behind that of its Asian neighbors and other major developed economies. The Japanese economy is heavily dependent on international trade and has been adversely affected by trade tariffs, other protectionist measures, competition from emerging economies and the economic conditions of its trading partners. Japan's relations with its neighbors, particularly China, North Korea, South Korea and Russia, have at times been strained due to territorial disputes, historical animosities and defense concerns. Most recently, the Japanese government has shown concern over the increased nuclear and military activity by North Korea. Strained relations may cause uncertainty in the Japanese markets and adversely affect the overall Japanese economy in times of crisis. China has become an important trading partner with Japan, yet the countries' political relationship has become strained. Should political tension increase, it could adversely affect the economy, especially the export sector, and destabilize the region as a whole. Japan is located in a part of the world that has historically been prone to natural disasters such as earthquakes, volcanoes and tsunamis and is economically sensitive to environmental events. Any such event, such as the major earthquake and tsunami which struck Japan in March 2011, could result in a significant adverse impact on the Japanese economy. Japan also remains heavily dependent on oil imports, and higher commodity prices could therefore have a negative impact on the economy. Furthermore, Japanese corporations often engage in high levels of corporate leveraging, extensive cross-purchases of the securities of other corporations and are subject to a changing corporate governance structure. Japan may be subject to risks relating to political, economic and labor risks. Any of these risks, individually or in the aggregate, could adversely affect investments in the fund.

Historically, Japan has been subject to unpredictable national politics and may experience frequent political turnover. Future political developments may lead to changes in policy that might adversely affect the fund's investments. In addition, the Japanese economy faces several

concerns, including a financial system with large levels of nonperforming loans, over-leveraged corporate balance sheets, extensive cross-ownership by major corporations, a changing corporate governance structure, and large government deficits. The Japanese yen has fluctuated widely at times and any increase in its value may cause a decline in exports that could weaken the economy. Furthermore, Japan has an aging workforce. It is a labor market undergoing fundamental structural changes, as traditional lifetime employment clashes with the need for increased labor mobility, which may adversely affect Japan's economic competitiveness.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities or a decline in the value of any investments made with cash collateral. These events, and securities lending in general, could trigger adverse tax consequences for the fund and its investors. For example, if the fund loans its securities, the fund and its investors may lose the ability to treat certain fund distributions associated with those securities as qualified dividend income.

Derivatives risk. Derivatives are financial instruments, such as futures and swaps, whose values are based on the value of one or more indicators, such as a security, asset, currency, interest rate, or index. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile and the fund could lose more than the amount it invests. Many derivative transactions are entered into "over-the-counter" (i.e., not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of the fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the fund's rights as a creditor (e.g., the fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the fund's derivative positions at any time.

Futures risk. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. Depending on the terms of the particular contract, futures contracts are settled through either physical delivery of the underlying instrument on the settlement date or by payment of a cash settlement amount on the settlement date. A decision as to whether,

when and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the derivatives risks discussed above, the prices of futures can be highly volatile, using futures can lower total return and the potential loss from futures can exceed the fund's initial investment in such contracts.

Xtrackers MSCI USA ESG Leaders Equity ETF

INVESTMENT OBJECTIVE

Xtrackers MSCI USA ESG Leaders Equity ETF (the "fund"), seeks investment results that correspond generally to the performance, before fees and expenses, of the MSCI USA ESG Leaders Index (the "Underlying Index").

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a "passive" or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is a capitalization weighted index that provides exposure to companies with high environmental, social and governance ("ESG") performance relative to their sector peers. The Underlying Index consists of large- and medium-capitalization companies in the US market. The annual review of the Underlying Index takes place in May and it is rebalanced in August, November and February; the fund updates and rebalances its portfolio in a corresponding fashion.

The Underlying Index uses MSCI ESG Ratings, MSCI ESG Controversies and MSCI Business Involvement Screening Research (collectively, "MSCI ESG Research") to determine index components for the Underlying Index.

■ MSCI ESG Ratings provides research, analysis and ratings of how well companies manage their ESG risks and opportunities. MSCI ESG Ratings provides a company with an overall ESG rating on a seven point scale, ranging from 'AAA' to 'CCC.' Existing constituents of the Underlying Index are required to have an MSCI ESG rating of BB or above to remain in the index, and companies that are currently not constituents of the Underlying Index are also required to have an MSCI ESG rating of BB or above to be considered eligible for addition.

■ MSCI ESG Controversies provides assessments of controversies concerning the negative ESG impact of company operations, products and services. A controversy case is defined as an instance or ongoing situation in which company operations and/or products allegedly have a negative environmental, social, and/or governance impact. A case is typically a single event such as a spill, accident, regulatory action, or a set of closely linked events or allegations such as health and safety fines at the same facility, multiple allegations of anti-competitive behavior related to the same product line, multiple community

protests at the same company location, or multiple individual lawsuits alleging the same type of discrimination. MSCI ESG Controversies score companies on a scale of 0 to 10, with 0 being the most severe controversy. Existing constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 1 or above to remain in the index, while companies that are currently not constituents of the Underlying Index are required to have an MSCI ESG Controversies Score of 3 or above to be considered eligible for addition.

■ MSCI ESG Business Involvement Screening Research aims to enable institutional investors to manage ESG standards and restrictions reliably and efficiently. Companies that are involved in specific business activities which have high potential for negative social and/or environmental impact, such as alcohol, gambling, tobacco, nuclear power, conventional weapons, nuclear weapons, controversial weapons and civilian firearms, are ineligible for inclusion.

The fund uses a full replication indexing strategy to seek to track the Underlying Index. As such, the fund invests directly in the component securities (or a substantial number of the component securities) of the Underlying Index in substantially the same weightings in which they are represented in the Underlying Index. If it is not possible for the fund to acquire component securities due to limited availability or regulatory restrictions, the fund may use a representative sampling indexing strategy to seek to track the Underlying Index instead of a full replication indexing strategy. "Representative sampling" is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield), and liquidity measures similar to those of the Underlying Index. The fund may or may not hold all of the securities in the Underlying Index when using a representative sampling indexing strategy. The fund will invest at least 80% of its total assets (but typically far more) in component securities of the Underlying Index.

As of October 31, 2019, the Underlying Index consisted of 324 securities, with an average market capitalization of approximately \$41.5 billion and a minimum market capitalization of approximately \$3.1 billion. The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in listed equity securities of issuers incorporated in the United States.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2019, a significant percentage of the Underlying Index was comprised of issuers in the information technology sector (22.6%). The information technology sector includes companies

engaged in developing software and providing data processing and outsourced services, along with manufacturing and distributing communications equipment, computers and other electronic equipment and instruments. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

While the fund is currently classified as "non-diversified" under the Investment Company Act of 1940, it may operate as or become classified as "diversified" over time. The fund could again become non-diversified solely as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track. Shareholder approval will not be sought when the fund crosses from diversified to non-diversified status under such circumstances.

The fund may invest its remaining assets in other securities, including securities not in the Underlying Index, cash and cash equivalents, money market instruments, such as repurchase agreements or money market funds (including money market funds advised by the Advisor or its affiliates (subject to applicable limitations under the 1940 Act), or exemptions therefrom), convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index) and in futures contracts, options on futures contracts and other types of options and swaps related to its Underlying Index. The fund will not use futures and options for speculative purposes.

The fund expects to use futures contracts to a limited extent in seeking performance that corresponds to its Underlying Index.

The fund or securities referred to herein are not sponsored, endorsed, issued, sold or promoted by MSCI, and MSCI bears no liability with respect to any the fund or securities or any index on which the fund or securities are based. The Prospectus contains a more detailed description of the limited relationship MSCI has with DBX Advisors LLC and any related funds.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

Underlying Index Information

MSCI USA ESG Leaders Index

Number of Components: approximately 324

Index Description. The MSCI USA ESG Leaders Index is a free float-adjusted market capitalization weighted index capitalization weighted indexes design to represent the performance of companies that have high environmental, social and governance ("ESG") performance relative to their sector peers. The Underlying Index consists of large- and medium-capitalization companies in the US market.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective.

ESG investment strategy risk. The Underlying Index's ESG methodology, and thus the fund's investment strategy, limits the types and number of investment opportunities available to the fund and, as a result, the fund may underperform other funds that do not have an ESG focus. The Underlying Index's ESG methodology may result in the fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the index provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

Stock market risk. When stock prices fall, you should expect the value of your investment to fall as well. Stock prices can be hurt by poor management on the part of the stock's issuer, shrinking product demand and other business risks. These may affect single companies as well as groups of companies. The market as a whole may not favor the types of investments the fund makes, which could adversely affect a stock's price, regardless of how well the company performs, or the fund's ability to sell a stock at an attractive price. There is a chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising and falling prices. Events in the US and global financial markets, including actions taken by the US Federal Reserve or foreign central banks to stimulate or stabilize economic growth, may at times result in unusually high market volatility which could negatively affect performance. Further, geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes and related geopolitical events have led, and in the future may lead, to increased short-term market volatility, which may disrupt securities markets and have adverse long-term effects on US and world economies and markets. To the extent that the fund invests in a particular geographic region, capitalization or sector, the fund's performance may be affected by the general performance of that region, capitalization or sector.

Medium-sized company risk. Medium-sized company stocks tend to be more volatile than large company stocks. Because stock analysts are less likely to follow medium-sized companies, less information about them is available to investors. Industry-wide reversals may have a greater impact on medium-sized companies, since they lack the financial resources of larger companies. Medium-sized company stocks are typically less liquid than large company stocks.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in circumstances where redemptions from the fund may be higher than normal.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Information technology sector risk. To the extent that the fund invests significantly in the information technology sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the information technology sector. Information technology companies are particularly vulnerable to government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Information technology companies also face competition for services of qualified personnel. Additionally, the products of information technology companies may face obsolescence due to rapid technological development and frequent new product introduction by competitors. Finally, information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Indexing risk. While the exposure of an index to its component securities is by definition 100%, the fund's effective exposure to index securities may vary over time. Because

an index fund is designed to maintain a high level of exposure to its Underlying Index at all times, it will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Tracking error risk. The performance of the fund may diverge from that of its Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. In addition, to the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index) it may cause the fund to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to legal restrictions or limitations imposed by the governments of certain countries, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other regulatory reasons. To the extent the fund calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

The need to comply with the tax diversification and other requirements of the Internal Revenue Code may also impact the fund's ability to replicate the performance of its Underlying Index. In addition, if the fund utilizes derivative instruments or holds other instruments that are not

included in its Underlying Index, its return may not correlate as well with the returns of its Underlying Index as would be the case if the fund purchased all the securities in its Underlying Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from NAV during periods of market volatility. Differences between secondary market prices and the value of the fund's holdings may be due largely to supply and demand forces in the secondary market, which may not be the same forces as those influencing prices for securities held by the fund at a particular time. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units, the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. In addition, there may be times when the market price and the value of the fund's holdings vary significantly and you may pay more than the value of the fund's holdings when buying shares on the secondary market, and you may receive less than the value of the fund's holdings when you sell those shares. While the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in trading prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. If market makers exit the business or are unable to continue making markets in fund's shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). The market price of shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialist, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that shares may trade at a discount to the fund's NAV, and the discount is likely to be greatest when the price of shares is falling fastest, which may be the time that you most want to sell your shares. There are various methods by which investors can purchase and sell shares of the funds and various orders that may be placed. Investors should consult their financial intermediary before purchasing or selling shares of the fund.

Secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The bid-ask spread varies over time for shares of the fund based on the fund's trading volume and market liquidity, and is generally lower if the fund has substantial trading volume and market liquidity, and higher if the fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size). The fund's bid-ask spread may also be impacted by the liquidity of the underlying securities held by the fund, particularly for newly launched or smaller funds or in instances of significant volatility of the underlying securities. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on an exchange and may, therefore, have a material effect on the market price of the fund's shares.

Operational risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations.

Cyber-attacks may include unauthorized attempts by third parties to improperly access, modify, disrupt the operations of, or prevent access to the systems of the fund's service providers or counterparties, issuers of securities held by the fund or other market participants or data within them. In addition, power or communications outages, acts of god, information technology equipment malfunctions, operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data. Market events also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

Cyber-attacks, disruptions, or failures may adversely affect the fund and its shareholders or cause reputational damage and subject the fund to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted, and operations may be disrupted (e.g., cyber-attacks or operational failures may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value, and impede trading). In addition, cyber-attacks, disruptions, or failures involving a fund counterparty could affect such

counterparty's ability to meet its obligations to the fund, which may result in losses to the fund and its shareholders. Similar types of operational and technology risks are also present for issuers of securities held by the fund, which could have material adverse consequences for such issuers, and may cause the fund's investments to lose value. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions, or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund, or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will address the possibility of and fallout from cyber-attacks, disruptions, or failures. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund, or other market participants.

For example, the fund relies on various sources to calculate its NAV. Therefore, the fund is subject to certain operational risks associated with reliance on third party service providers and data sources. NAV calculation may be impacted by operational risks arising from factors such as failures in systems and technology. Such failures may result in delays in the calculation of a fund's NAV and/or the inability to calculate NAV over extended time periods. The fund may be unable to recover any losses associated with such failures.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described below under "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Non-diversification risk. The fund is classified as non-diversified under the Investment Company Act of 1940, as amended. This means that the fund may invest in

securities of relatively few issuers. Thus, the performance of one or a small number of portfolio holdings can affect overall performance.

If the fund becomes classified as "diversified" over time and again becomes non-diversified as a result of a change in relative market capitalization or index weighting of one or more constituents of the index that the fund is designed to track, non-diversification risk would apply.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities or a decline in the value of any investments made with cash collateral. These events, and securities lending in general, could trigger adverse tax consequences for the fund and its investors. For example, if the fund loans its securities, the fund and its investors may lose the ability to treat certain fund distributions associated with those securities as qualified dividend income.

Derivatives risk. Derivatives are financial instruments, such as futures and swaps, whose values are based on the value of one or more indicators, such as a security, asset, currency, interest rate, or index. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile and the fund could lose more than the amount it invests. Many derivative transactions are entered into "over-the-counter" (i.e., not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of the fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the fund's rights as a creditor (e.g., the fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the fund's derivative positions at any time.

Futures risk. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. Depending on the terms of the particular contract, futures contracts are settled through either physical delivery of the underlying instrument on the settlement date or by payment of a cash settlement amount on the settlement date. A decision as to whether, when and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the derivatives risks

discussed above, the prices of futures can be highly volatile, using futures can lower total return and the potential loss from futures can exceed the fund's initial investment in such contracts.

OTHER POLICIES AND RISKS

While the previous pages describe the main points of each fund's strategy and risks, there are a few other matters to know about:

- Each of the policies described herein, including the investment objective and 80% investment policies of each fund, constitutes a non-fundamental policy that may be changed by the Board without shareholder approval. Each fund's 80% investment policies require 60 days' prior written notice to shareholders before they can be changed. Certain fundamental policies of each fund are set forth in the SAI.
- Because each fund seeks to track its Underlying Index, no fund invests defensively and each fund will not invest in money market instruments or other short-term investments as part of a temporary defensive strategy to protect against potential market declines.
- Each fund may borrow money from a bank up to a limit of 10% of the value of its assets, but only for temporary or emergency purposes.
- Xtrackers MSCI Emerging Markets ESG Leaders Equity ETF and Xtrackers MSCI ACWI ex USA ESG Leaders Equity ETF may borrow money under a credit facility to the extent necessary for temporary or emergency purposes, including the funding of shareholder redemption requests, trade settlements, and as necessary to distribute to shareholders any income necessary to maintain a fund's status as a regulated investment company ("RIC").
- From time to time a third party, the Advisor and/or its affiliates may invest in a fund and hold its investment for a specific period of time in order for a fund to achieve size or scale. There can be no assurance that any such entity would not redeem its investment or that the size of a fund would be maintained at such levels. In order to comply with applicable law, it is possible that the Advisor or its affiliates, to the extent they are invested in a fund, may be required to redeem some or all of their ownership interests in a fund prematurely or at an inopportune time.
- Secondary market trading in fund shares may be halted by a stock exchange because of market conditions or other reasons. In addition, trading in fund shares on a stock exchange or in any market may be subject to trading halts caused by extraordinary market volatility pursuant to "circuit breaker" rules on the exchange or market. If a trading halt or unanticipated early closing of a stock exchange occurs, a shareholder may be unable to purchase or sell shares of each fund. There can be no

assurance that the requirements necessary to maintain the listing or trading of fund shares will continue to be met or will remain unchanged or that shares will trade with any volume, or at all, in any secondary market. As with all other exchange traded securities, shares may be sold short and may experience increased volatility and price decreases associated with such trading activity.

- From time to time, a fund may have a concentration of shareholder accounts holding a significant percentage of shares outstanding. Investment activities of these shareholders could have a material impact on a fund. For example, a fund may be used as an underlying investment for other registered investment companies.

Portfolio Holdings Information

A description of DBX ETF Trust's ("Trust") policies and procedures with respect to the disclosure of each fund's portfolio securities is available in each fund's SAI. The top holdings of each fund can be found at Xtrackers.com. Fund fact sheets provide information regarding each fund's top holdings and may be requested by calling 1-855-329-3837 (1-855-DBX-ETFS).

WHO MANAGES AND OVERSEES THE FUNDS

The Investment Advisor

DBX Advisors LLC ("Advisor"), with headquarters at 875 Third Avenue, New York, NY 10022, is the investment advisor for the fund. Under the oversight of the Board, the Advisor makes the investment decisions, buys and sells securities for the fund and conducts research that leads to these purchase and sale decisions.

The Advisor is an indirect, wholly-owned subsidiary of DWS Group GmbH & Co. KGaA ("DWS Group"), a separate, publicly-listed financial services firm that is an indirect, majority-owned subsidiary of Deutsche Bank AG. Founded in 2010, the Advisor managed approximately \$15.6 billion in 33 operational exchange-traded funds, as of November 30, 2019.

DWS represents the asset management activities conducted by DWS Group or any of its subsidiaries, including the Advisor and other affiliated investment advisors.

DWS is a global organization that offers a wide range of investing expertise and resources, including hundreds of portfolio managers and analysts and an office network that reaches the world's major investment centers. This well-resourced global investment platform brings together a wide variety of experience and investment insight across industries, regions, asset classes and investing styles.

The Advisor may utilize the resources of its global investment platform to provide investment management services through branch offices or affiliates located outside the US. In some cases, the Advisor may also utilize its branch offices or affiliates located in the US or outside the US to perform certain services, such as trade execution,

trade matching and settlement, or various administrative, back-office or other services. To the extent services are performed outside the US, such activity may be subject to both US and foreign regulation. It is possible that the jurisdiction in which the Advisor or its affiliate performs such services may impose restrictions or limitations on portfolio transactions that are different from, and in addition to, those in the US.

Management Fee. Under the Investment Advisory Agreement, the Advisor is responsible for substantially all expenses of each fund, including the cost of transfer agency, custody, fund administration, compensation paid to the Independent Board Members, legal, audit and other services, except for the fee payments to the Advisor under the Investment Advisory Agreement (also known as a “unitary advisory fee”), interest expense, acquired fund fees and expenses, taxes, brokerage expenses, distribution fees or expenses (if any), litigation expenses and other extraordinary expenses.

For its services to each fund, during the most recent fiscal year, the Advisor received aggregate unitary advisory fees at the following annual rates as a percentage of each fund’s average daily net assets.

Fund Name	Fee Paid
Xtrackers MSCI Emerging Markets ESG Leaders Equity ETF	0.20%
Xtrackers MSCI EAFE ESG Leaders Equity ETF	0.14%
Xtrackers MSCI ACWI ex USA ESG Leaders Equity ETF	0.16%
Xtrackers MSCI USA ESG Leaders Equity ETF	0.10%

A discussion regarding the basis for the Board’s approval of each fund’s Investment Advisory Agreement is contained in the most recent semi-annual report for the semi-annual period ended February 29, 2019 for Xtrackers MSCI Emerging Markets ESG Leaders Equity ETF, Xtrackers MSCI EAFE ESG Leaders Equity ETF and Xtrackers MSCI ACWI ex USA ESG Leaders Equity ETF, and in the most recent annual report for the annual period ended August 31, 2019 for Xtrackers MSCI USA ESG Leaders Equity ETF. For information on how to obtain shareholder reports, see the back cover.

Multi-Manager Structure. The Advisor and the Trust may rely on an exemptive order (the “Order”) from the SEC that permits the Advisor to enter into investment sub-advisory agreements with unaffiliated and affiliated subadvisors without obtaining shareholder approval. The Advisor, subject to the review and approval of the Board, selects subadvisors for each fund and supervises, monitors and evaluates the performance of the subadvisor.

The Order also permits the Advisor, subject to the approval of the Board, to replace subadvisors and amend investment subadvisory agreements, including fees, without

shareholder approval whenever the Advisor and the Board believe such action will benefit a fund and its shareholders. The Advisor thus has the ultimate responsibility (subject to the ultimate oversight of the Board) to recommend the hiring and replacement of subadvisors as well as the discretion to terminate any subadvisor and reallocate a fund’s assets for management among any other subadvisor(s) and itself. This means that the Advisor is able to reduce the subadvisory fees and retain a larger portion of the management fee, or increase the subadvisory fees and retain a smaller portion of the management fee. Pursuant to the Order, the Advisor is not required to disclose its contractual fee arrangements with any subadvisor. The Advisor compensates a subadvisor out of its management fee.

MANAGEMENT

Xtrackers MSCI Emerging Markets ESG Leaders Equity ETF

The following Portfolio Managers are primarily responsible for the day-to-day management of the fund. Each Portfolio Manager functions as a member of a portfolio management team.

Bryan Richards, CFA, Managing Director. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2011 with 11 years of industry experience. Prior to joining DWS, he worked in ETF management at XShares Advisors, an ETF issuer based in New York, and before that he served as an equity analyst for Fairhaven Capital LLC, a long/short equity fund.
- Head of Passive Portfolio Management, Americas: New York.
- BS in Finance, Boston College.

Patrick Dwyer, Director. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2016 with 16 years of industry experience. Prior to joining DWS, he was the head of Northern Trust’s Equity Index, ETF, and Overlay portfolio management team in Chicago, managing portfolios for North American based clients. His time at Northern Trust included working in New York, Chicago, and in Hong Kong building a portfolio management desk. Prior to joining Northern Trust in 2003, he participated in the Deutsche Asset Management graduate training program. He rotated through the domestic fixed income and US structured equity fund management groups.
- Lead Equity Portfolio Manager, US Passive Equities: New York.
- BS in Finance, Rutgers University.

Shlomo Bassous, Vice President. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2017, with twelve years of industry experience. Prior to his joining DWS, Prior to his current role, Mr. Bassous served as Portfolio Manager at Northern Trust Asset Management where he managed equity portfolios across a variety of global benchmarks. While at Northern Trust, he spent several years in Chicago, London and Hong Kong where he managed portfolios on behalf of institutional clients in North America, Europe, the Middle East and Asia. Before joining Northern Trust in 2007, he worked at The Bank of New York Mellon and Morgan Stanley in a variety of roles supporting equity trading and portfolio management.
- Portfolio Manager for Equities, Passive Asset Management: New York.
- BS in Finance from Sy Syms School of Business, Yeshiva University.

Xtrackers MSCI EAFE ESG Leaders Equity ETF

The following Portfolio Managers are primarily responsible for the day-to-day management of the fund. Each Portfolio Manager functions as a member of a portfolio management team.

Bryan Richards, CFA, Managing Director. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2011 with 11 years of industry experience. Prior to joining DWS, he worked in ETF management at XShares Advisors, an ETF issuer based in New York, and before that he served as an equity analyst for Fairhaven Capital LLC, a long/short equity fund.
- Head of Passive Portfolio Management, Americas: New York.
- BS in Finance, Boston College.

Patrick Dwyer, Director. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2016 with 16 years of industry experience. Prior to joining DWS, he was the head of Northern Trust's Equity Index, ETF, and Overlay portfolio management team in Chicago, managing portfolios for North American based clients. His time at Northern Trust included working in New York, Chicago, and in Hong Kong building a portfolio management desk. Prior to joining Northern Trust in 2003, he participated in the Deutsche Asset Management graduate training program. He rotated through the domestic fixed income and US structured equity fund management groups.
- Lead Equity Portfolio Manager, US Passive Equities: New York.
- BS in Finance, Rutgers University.

Shlomo Bassous, Vice President. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2017, with twelve years of industry experience. Prior to his joining DWS, Prior to his current role, Mr. Bassous served as Portfolio Manager at Northern Trust Asset Management where he managed equity portfolios across a variety of global benchmarks. While at Northern Trust, he spent several years in Chicago, London and Hong Kong where he managed portfolios on behalf of institutional clients in North America, Europe, the Middle East and Asia. Before joining Northern Trust in 2007, he worked at The Bank of New York Mellon and Morgan Stanley in a variety of roles supporting equity trading and portfolio management.

Each fund's Statement of Additional Information provides additional information about a portfolio manager's investments in each fund, a description of the portfolio management compensation structure and information regarding other accounts managed.

Investing in the Funds

Additional shareholder information, including how to buy and sell shares of a fund, is available free of charge by calling toll-free: 1-855-329-3837 (1-855-DBX-ETFS) or visiting our website at Xtrackers.com.

BUYING AND SELLING SHARES

Shares of a fund are listed for trading on a national securities exchange during the trading day. Shares can be bought and sold throughout the trading day at market prices like shares of other publicly-traded companies. The Trust does not impose any minimum investment for shares of a fund purchased on an exchange. Buying or selling fund shares involves two types of costs that may apply to all securities transactions. When buying or selling shares of a fund through a broker, you will likely incur a brokerage commission or other charges determined by your broker. In addition, you may incur the cost of the “spread” – that is, any difference between the bid price and the ask price. The commission is frequently a fixed amount and may be a significant proportional cost for investors seeking to buy or sell small amounts of shares. The spread varies over time for shares of a fund based on its trading volume and market liquidity, and is generally lower if a fund has a lot of trading volume and market liquidity and higher if a fund has little trading volume and market liquidity.

Shares of a fund may be acquired or redeemed directly from a fund only in Creation Units or multiples thereof, as discussed in the section of this Prospectus entitled “Creations and Redemptions.” Only an AP may engage in creation or redemption transactions directly with a fund. Once created, shares of a fund generally trade in the secondary market in amounts less than a Creation Unit.

The Board has evaluated the risks of market timing activities by a fund’s shareholders. The Board noted that shares of a fund can only be purchased and redeemed directly from the fund in Creation Units by APs and that the vast majority of trading in a fund’s shares occurs on the secondary market. Because the secondary market trades do not involve a fund directly, it is unlikely those trades would cause many of the harmful effects of market timing, including dilution, disruption of portfolio management, increases in a fund’s trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with a fund, to the extent effected

in-kind (i.e., for securities), such trades do not cause any of the harmful effects (as previously noted) that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, the Board noted that such trades could result in dilution to a fund and increased transaction costs, which could negatively impact a fund’s ability to achieve its investment objective. However, the Board noted that direct trading by APs is critical to ensuring that a fund’s shares trade at or close to NAV. In addition, a fund imposes both fixed and variable transaction fees on purchases and redemptions of fund shares to cover the custodial and other costs incurred by a fund in effecting trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that a fund’s trading costs increase in those circumstances. Given this structure, the Board determined that with respect to a fund it is not necessary to adopt policies and procedures to detect and deter market timing of a fund’s shares.

The national securities exchange on which a fund’s shares are listed is open for trading Monday through Friday and is closed on weekends and the following holidays: New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

The 1940 Act imposes certain restrictions on investments by registered investment companies in the securities of other investment companies, such as the funds. Registered investment companies are permitted to invest in a fund beyond applicable 1940 Act limitations, subject to certain terms and conditions set forth in an SEC exemptive order issued to the Trust, including that such investment companies enter into an agreement with the Trust.

Shares of a fund trade on the exchange and under the ticker symbol as shown in the table below.

Fund name	Ticker Symbol	Stock Exchange
Xtrackers MSCI Emerging Markets ESG Leaders Equity ETF	EMSG	NYSE Arca, Inc.
Xtrackers MSCI EAFE ESG Leaders Equity ETF	EASG	NYSE Arca, Inc.
Xtrackers MSCI ACWI ex USA ESG Leaders Equity ETF	ACSG	NYSE Arca, Inc.
Xtrackers MSCI USA ESG Leaders Equity ETF	USSG	NYSE Arca, Inc.

Book Entry

Shares of a fund are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding shares of a fund and is recognized as the owner of all shares for all purposes.

Investors owning shares of a fund are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for shares of a fund. DTC participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of shares, you are not entitled to receive physical delivery of stock certificates or to have shares registered in your name, and you are not considered a registered owner of shares. Therefore, to exercise any right as an owner of shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or “street name” form.

Share Prices

The trading prices of a fund’s shares in the secondary market generally differ from a fund’s daily NAV per share and are affected by market forces such as supply and demand, economic conditions and other factors. Information regarding the intraday value of shares of a fund, also known as the “indicative optimized portfolio value” (“IOPV”), is disseminated every 15 seconds throughout the trading day by the national securities exchange on which a fund’s shares are listed or by market data vendors or other information providers. The IOPV is based on the current market value of the securities and/or cash required to be deposited in exchange for a Creation Unit. The IOPV does not necessarily reflect the precise composition of the current portfolio of securities held by a fund at a particular point in time nor the best possible valuation of the current portfolio. Therefore, the IOPV should not be viewed as a “real-time” update of the NAV, which is computed only once a day. The IOPV is generally determined by using both current market quotations and/or price quotations obtained from broker-dealers that may trade in the portfolio securities held by a fund. The quotations of certain fund holdings

may not be updated during US trading hours if such holdings do not trade in the US. Each fund is not involved in, or responsible for, the calculation or dissemination of the IOPV and makes no representation or warranty as to its accuracy.

Determination of Net Asset Value

The NAV of each fund is generally determined once daily Monday through Friday generally as of the regularly scheduled close of business of the New York Stock Exchange (“NYSE”) (normally 4:00 p.m., Eastern time) on each day that the NYSE is open for trading, provided that (a) any fund assets or liabilities denominated in currencies other than the US dollar are translated into US dollars at the prevailing market rates on the date of valuation as quoted by one or more data service providers (as detailed below) and (b) US fixed-income assets may be valued as of the announced closing time for trading in fixed-income instruments in a particular market or exchange. NAV is calculated by deducting all of the fund’s liabilities from the total value of its assets and dividing the result by the number of shares outstanding, rounding to the nearest cent. All valuations are subject to review by the Trust’s Board or its delegate.

In determining NAV, expenses are accrued and applied daily and securities and other assets for which market quotations are available are valued at market value. Equity investments are valued at market value, which is generally determined using the last reported official closing or last trading price on the exchange or market on which the security is primarily traded at the time of valuation. Debt securities’ values are based on price quotations or other equivalent indications of value provided by a third-party pricing service. Any such third-party pricing service may use a variety of methodologies to value some or all of a fund’s debt securities to determine the market price. For example, the prices of securities with characteristics similar to those held by a fund may be used to assist with the pricing process. In addition, the pricing service may use proprietary pricing models. In certain cases, some of a fund’s debt securities may be valued at the mean between the last available bid and ask prices for such securities or, if such prices are not available, at prices for securities of comparable maturity, quality, and type. Short-term securities for which market quotations are not readily available are valued at amortized cost, which approximates market value. Money market securities maturing in 60 days or less will be valued at amortized cost. The approximate value of shares of the applicable fund, an amount representing on a per share basis the sum of the current value of the deposit securities based on their then current market price and the estimated cash component will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. Foreign currency exchange rates with respect to each fund’s (except Xtrackers MSCI USA ESG Leaders ETF) non-US securities are generally determined as of 4:00 p.m.,

London time. Generally, trading in non-US securities, US government securities, money market instruments and certain fixed-income securities is substantially completed each day at various times prior to the close of business on the NYSE. The values of such securities used in computing the NAV of each fund are determined as of such earlier times. The value of each Underlying Index will not be calculated and disseminated intra-day. The value and return of each fund's (except Xtrackers MSCI USA ESG Leaders ETF) respective Underlying Index is calculated once each trading day by the Index Provider based on prices received from the international local markets. In addition, with respect to these funds, the value of assets or liabilities denominated in non-US currencies will be converted into US dollars using prevailing market rates on the date of valuation as quoted by one or more data service providers. Use of a rate different from the rate used by the Index Provider may adversely affect the fund's ability to track its respective Underlying Index.

If a security's market price is not readily available or does not otherwise accurately reflect the fair value of the security, the security will be valued by another method that the Adviser believes will better reflect fair value in accordance with the Trust's valuation policies and procedures approved by the Board. Each fund may use fair value pricing in a variety of circumstances, including but not limited to, situations when the value of a security in a fund's portfolio has been materially affected by events occurring after the close of the market on which the security is principally traded (such as a corporate action or other news that may materially affect the price of a security) or trading in a security has been suspended or halted. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security is materially different from the value that could be realized upon the sale of the security. In addition, fair value pricing could result in a difference between the prices used to calculate a fund's NAV and the prices used by the fund's Underlying Index. This may adversely affect a fund's ability to track its Underlying Index. With respect to securities that are primarily listed on foreign exchanges, the value of each fund's (except Xtrackers MSCI USA ESG Leaders ETF) portfolio securities may change on days when you will not be able to purchase or sell your shares.

CREATIONS AND REDEMPTIONS

Prior to trading in the secondary market, shares of the funds are "created" at NAV by market makers, large investors and institutions only in block-size Creation Units of 50,000 shares or multiples thereof ("Creation Units"). The size of a Creation Unit will be subject to change. Each "creator" or AP (which must be a DTC participant) enters into an authorized participant agreement ("Authorized Participant Agreement") with the fund's distributor, ALPS Distributors, Inc. (the "Distributor"), subject to acceptance by the Transfer Agent. Only an AP may create or redeem Creation Units. Creation Units generally are issued and

redeemed in exchange for a specific basket of securities approximating the holdings of a fund and a designated amount of cash. Each fund may pay out a portion of its redemption proceeds in cash rather than through the in-kind delivery of portfolio securities. Except when aggregated in Creation Units, shares are not redeemable by the fund. The prices at which creations and redemptions occur are based on the next calculation of NAV after an order is received in a form described in the Authorized Participant Agreement.

Additional information about the procedures regarding creation and redemption of Creation Units (including the cut-off times for receipt of creation and redemption orders) is included in the SAI.

Each fund intends to comply with the US federal securities laws in accepting securities for deposits and satisfying redemptions with redemption securities, including that the securities accepted for deposits and the securities used to satisfy redemption requests will be sold in transactions that would be exempt from registration under the Securities Act of 1933, as amended ("1933 Act"). Further, an AP that is not a "qualified institutional buyer," as such term is defined under Rule 144A under the 1933 Act, will not be able to receive fund securities that are restricted securities eligible for resale under Rule 144A.

DIVIDENDS AND DISTRIBUTIONS

General Policies. Dividends from net investment income, if any, are generally declared and paid semi-annually (quarterly for Xtrackers MSCI USA ESG Leaders Equity ETF) by each fund. Distributions of net realized capital gains, if any, generally are declared and paid once a year, but the Trust may make distributions on a more frequent basis for a fund. The Trust reserves the right to declare special distributions if, in its reasonable discretion, such action is necessary or advisable to preserve its status as a regulated investment company or to avoid imposition of income or excise taxes on undistributed income or realized gains.

Dividends and other distributions on shares of a fund are distributed on a pro rata basis to beneficial owners of such shares. Dividend payments are made through DTC participants and indirect participants to beneficial owners as of the record date with proceeds received from a fund.

Dividend Reinvestment Service. No dividend reinvestment service is provided by the Trust. Broker-dealers may make available the DTC book-entry Dividend Reinvestment Service for use by beneficial owners of a fund for reinvestment of their dividend distributions. Beneficial owners should contact their broker to determine the availability and costs of the service and the details of participation therein. Brokers may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole shares of a fund purchased in the secondary market.

TAXES

As with any investment, you should consider how your investment in shares of a fund will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in shares of a fund.

Unless your investment in fund shares is made through a tax-exempt entity or tax-deferred retirement account, such as an IRA, you need to be aware of the possible tax consequences when a fund makes distributions or you sell fund shares.

Taxes on Distributions

Distributions from a fund's net investment income (other than qualified dividend income), including distributions of income from securities lending and distributions out of the fund's net short-term capital gains, if any, are taxable to you as ordinary income. Distributions by a fund of net long-term capital gains in excess of net short-term capital losses (capital gain dividends) are taxable to you as long-term capital gains, regardless of how long you have held such fund's shares. Distributions by a fund that qualify as qualified dividend income are taxable to you at long-term capital gain rates. The maximum individual rate applicable to "qualified dividend income" and long-term capital gains is generally either 15% or 20%, depending on whether the individual's income exceeds certain threshold amounts.

Dividends are eligible to be qualified dividend income to you, if you meet certain holding period requirements discussed below, if they are attributable to qualified dividend income received by a fund. Generally, qualified dividend income includes dividend income from taxable US corporations and qualified non-US corporations, provided that a fund satisfies certain holding period requirements in respect of the stock of such corporations and has not hedged its position in the stock in certain ways. For this purpose, a qualified non-US corporation means any non-US corporation that is eligible for benefits under a comprehensive income tax treaty with the US which includes an exchange of information program or if the stock with respect to which the dividend was paid is readily tradable on an established US security market. The term excludes a corporation that is a passive foreign investment company.

For a dividend to be treated as qualified dividend income, the dividend must be received with respect to a share of stock held without being hedged by a fund, and to a share of the fund held without being hedged by you, for 61 days during the 121-day period beginning at the date which is 60 days before the date on which such share becomes ex-dividend with respect to such dividend or in the case of certain preferred stock 91 days during the 181-day period beginning 90 days before such date.

In general, your distributions are subject to US federal income tax for the year when they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year.

If a fund's distributions exceed current and accumulated earnings and profits, all or a portion of the distributions made in the taxable year may be re-characterized as a return of capital to shareholders. A return of capital distribution generally will not be taxable but will reduce the shareholder's cost basis and result in a higher capital gain or lower capital loss when those shares on which the distribution was received are sold.

If you are neither a resident nor a citizen of the US or if you are a non-US entity, a fund's ordinary income dividends (which include distributions of net short-term capital gains) will generally be subject to a 30% US withholding tax, unless a lower treaty rate applies, provided that withholding tax will generally not apply to any gain or income realized by a non-US shareholder in respect of any distributions of long-term capital gains or upon the sale or other disposition of shares of a fund.

Dividends and interest received by a fund with respect to non-US securities may give rise to withholding and other taxes imposed by non-US countries. Tax conventions between certain countries and the US may reduce or eliminate such taxes. If more than 50% of the total assets of a fund at the close of a year consist of non-US stocks or securities, the fund may "pass through" to you certain non-US income taxes (including withholding taxes) paid by the fund. This means that you would be considered to have received as additional gross income your share of such non-US taxes, but you may, in such case, be entitled to either a corresponding tax deduction in calculating your taxable income, or, subject to certain limitations, a credit in calculating your US federal income tax.

If you are a resident or a citizen of the US, by law, back-up withholding (currently at a rate of 24%) will apply to your distributions and proceeds if you have not provided a taxpayer identification number or social security number and made other required certifications.

Taxes when Shares are Sold

Currently, any capital gain or loss realized upon a sale of fund shares is generally treated as a long-term gain or loss if the shares have been held for more than one year. Any capital gain or loss realized upon a sale of fund shares held for one year or less is generally treated as short-term gain or loss, except that any capital loss on the sale of shares held for six months or less is treated as long-term capital loss to the extent that capital gain dividends were paid with respect to such shares.

Medicare Tax

An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from a fund and net

gains from redemptions or other taxable dispositions of fund shares) of US individuals, estates and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds certain threshold amounts.

The foregoing discussion summarizes some of the consequences under current US federal tax law of an investment in a fund. It is not a substitute for personal tax advice. You may also be subject to state and local taxation on fund distributions and sales of shares. Consult your personal tax advisor about the potential tax consequences of an investment in shares of a fund under all applicable tax laws.

Authorized Participants and the Continuous Offering of Shares

Because new shares may be created and issued on an ongoing basis, at any point during the life of a fund a "distribution," as such term is used in the 1933 Act, may be occurring. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner that could render them statutory underwriters and subject to the prospectus delivery and liability provisions of the 1933 Act. Any determination of whether one is an underwriter must take into account all the relevant facts and circumstances of each particular case.

Broker-dealers should also note that dealers who are not "underwriters" but are participating in a distribution (as contrasted to ordinary secondary transactions), and thus dealing with shares that are part of an "unsold allotment" within the meaning of Section 4(3)(C) of the 1933 Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the 1933 Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the 1933 Act is available only with respect to transactions on a national securities exchange.

Certain affiliates of the fund and the Advisor may purchase and resell Creation Units pursuant to this Prospectus.

Transaction Fees

APs are charged standard creation and redemption transaction fees to offset transfer and other transaction costs associated with the issuance and redemption of Creation Units. Purchasers and redeemers of Creation Units for cash are required to pay an additional variable charge (up to a maximum of 2% for redemptions, including the standard redemption fee) to compensate for brokerage and market impact expenses. The standard creation and redemption transaction fee for each fund is set forth in the table below. The maximum redemption fee, as a percentage of the amount redeemed, is 2%.

Fund Name	Fee
Xtrackers MSCI Emerging Markets ESG Leaders Equity ETF	\$6,500
Xtrackers MSCI EAFE ESG Leaders Equity ETF	\$2,000
Xtrackers MSCI ACWI ex USA ESG Leaders Equity ETF	\$7,500
Xtrackers MSCI USA ESG Leaders Equity ETF	\$ 0 ⁽¹⁾

⁽¹⁾ Effective August 30, 2019, the standard and maximum transaction fees for the creation or redemption of a Creation Unit of the fund are paid by the Advisor. As such, the standard and maximum transaction fees for the creation or redemption of a Creation Unit of Xtrackers MSCI USA ESG Leaders Equity ETF are reduced from \$850 to \$0. The Advisor reserves the right to amend or discontinue this subsidy upon further supplement to the fund's prospectus.

DISTRIBUTION

The Distributor distributes Creation Units for each fund on an agency basis. The Distributor does not maintain a secondary market in shares of a fund. The Distributor has no role in determining the policies of a fund or the securities that are purchased or sold by a fund. The Distributor's principal address is 1290 Broadway, Suite 1100, Denver, Colorado 80203.

The Advisor and/or its affiliates may pay additional compensation, out of their own assets and not as an additional charge to a fund, to selected affiliated and unaffiliated brokers, dealers, participating insurance companies or other financial intermediaries ("financial representatives") in connection with the sale and/or distribution of fund shares or the retention and/or servicing of fund investors and fund shares ("revenue sharing"). For example, the Advisor and/or its affiliates may compensate financial representatives for providing a fund with "shelf space" or access to a third party platform or fund offering list or other marketing programs, including, without limitation, inclusion of a fund on preferred or recommended sales lists, fund "supermarket" platforms and other formal sales programs; granting the Advisor and/or its affiliates access to the financial representative's sales force; granting the Advisor and/or its affiliates access to the financial representative's conferences and meetings; assistance in training and educating the financial representative's personnel; and obtaining other forms of marketing support.

The level of revenue sharing payments made to financial representatives may be a fixed fee or based upon one or more of the following factors: gross sales, current assets and/or number of accounts of a fund attributable to the financial representative, the particular fund or fund type or other measures as agreed to by the Advisor and/or its affiliates and the financial representatives or any combination thereof. The amount of these revenue sharing payments is determined at the discretion of the Advisor and/or its affiliates from time to time, may be substantial,

and may be different for different financial representatives based on, for example, the nature of the services provided by the financial representative.

Receipt of, or the prospect of receiving, additional compensation may influence your financial representative's recommendation of a fund. You should review your financial representative's compensation disclosure and/or talk to your financial representative to obtain more information on how this compensation may have influenced your financial representative's recommendation of the fund.

Additional information regarding these revenue sharing payments is included in a fund's Statement of Additional Information, which is available to you on request at no charge (see the back cover of this Prospectus for more information on how to request a copy of the Statement of Additional Information).

It is possible that broker-dealers that execute portfolio transactions for a fund will also sell shares of a fund to their customers. However, the Advisor will not consider the sale of fund shares as a factor in the selection of broker-dealers to execute portfolio transactions for a fund. Accordingly, the Advisor has implemented policies and procedures reasonably designed to prevent its traders from considering sales of fund shares as a factor in the selection of broker-dealers to execute portfolio transactions for a fund. In addition, the Advisor and/or its affiliates will not use fund brokerage to pay for their obligation to provide additional compensation to financial representatives as described above.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often shares of each fund traded on NYSE Arca at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of each fund during the past calendar year can be found at Xtrackers.com.

Financial Highlights

The financial highlights are designed to help you understand recent financial performance. The figures in the first part of each table are for a single share. The total return figures represent the percentage that an investor in a fund would have earned (or lost), assuming all dividends and distributions were reinvested. This information has been audited by Ernst & Young LLP, independent registered public accounting firm, whose report, along with each fund's financial statements, is included in each fund's Annual Report (see "For More Information" on the back cover).

Appendix

INDEX PROVIDER AND LICENSES

MSCI, Inc. ("MSCI") is a leading provider of global indexes and benchmark related products and services to investors worldwide. MSCI is not affiliated with the Trust, the Advisor, The Bank of New York Mellon, the Distributor or any of their respective affiliates.

The Advisor has entered into a license agreement with the Index Provider to use each Underlying Index. The Advisor has also entered into a license agreement with a broker-dealer for the use of certain customized analytical data. All license fees are paid by the Advisor out of its own resources and not the assets of the funds.

MSCI ESG Leaders Indexes

MSCI Emerging Markets ESG Leaders Index, MSCI EAFE ESG Leaders Index, MSCI ACWI ex USA ESG Leaders Index and MSCI USA ESG Leaders Index (collectively, the "MSCI ESG Leaders Indexes") are calculated and maintained by MSCI Inc. ("Index Provider" or "MSCI"). The MSCI ESG Leaders Indexes are free float adjusted market capitalization weighted indexes designed to represent the performance of companies that have high environmental, social and governance ("ESG") performance relative to their sector peers. The MSCI ESG Leaders Indexes use MSCI ESG Ratings, MSCI ESG Controversies and MSCI Business Involvement Screening Research (collectively, "MSCI ESG Research") to determine index components for each MSCI ESG Leaders Index.

MSCI ESG Ratings provides research, analysis and ratings of how well companies manage their ESG risks and opportunities. MSCI ESG Ratings provides a company with an overall ESG rating on a seven point scale, ranging from 'AAA' to 'CCC.' Existing constituents of the MSCI ESG Leaders Indexes are required to have an MSCI ESG rating of BB or above to remain in the index, and companies that are currently not constituents of the MSCI ESG Leaders Indexes are also required to have an MSCI ESG rating of BB or above to be considered eligible for addition.

MSCI ESG Controversies provides assessments of controversies concerning the negative ESG of company operations, products and services. MSCI ESG Controversies score companies on a scale of 0 to 10, with 0 being the most severe controversy. Existing constituents of the MSCI ESG Leaders Indexes are required to have an MSCI ESG Controversies Score of 1 or above to remain in the index, while companies that are currently not constituents of the MSCI ESG Leaders Indexes are required to have an MSCI ESG Controversies Score of 3 or above to be considered eligible for addition.

MSCI ESG Business Involvement Screening Research aims to enable institutional investors to manage ESG standards and restrictions reliably and efficiently. Companies that are involved in specific business activities which have high potential for negative social and/or environmental impact, such as alcohol, gambling, tobacco, nuclear power, conventional weapons, nuclear weapons, controversial weapons and civilian firearms, are ineligible for inclusion.

Defining the Equity Universe. The selection universe for the MSCI ESG Leaders Indexes is defined by the constituents of the MSCI Global Investable Market Indexes ("GIMI"). The MSCI ESG Leaders Indexes use company ratings and research provided by MSCI ESG Research to determine eligibility for inclusion in the MSCI ESG Leaders Indexes. Constituents in the MSCI ESG Leaders Indexes are selected from the selection universe in the following order until 50% coverage by cumulative free-float adjusted market capitalization target is reached: (i) securities in the top 35%; (ii) 'AAA' and 'AA' rated securities in the top 50%; (iii) current index constituents in the top 65%; and (iv) remaining securities in the eligible universe.

The following guidelines are used in achieving the target sector coverage of 50%:

- For each sector, the eligible constituents are first ranked based on the company level ESG rating;
- If two companies have the same ESG Rating, the company with the better ESG Trend is given priority;

- In the case of two companies with the same ESG Rating and ESG Trend, an existing index constituent is given priority to maintain index stability. Between two existing constituents with the same ESG Rating and ESG Trend, the company with the higher industry adjusted ESG score is given priority. For two existing index constituents with the same industry adjusted ESG score, the larger company by free-float adjusted market capitalization is given priority;
- The cumulative sector coverage at each rank is calculated;
- In each sector, companies are selected until the cumulative sector coverage of the selected securities crosses 50% or there are no eligible securities left to be selected;
- If a company that increases the cumulative sector coverage above 50% (the “marginal company”) is a current ESG Leaders Index constituent, then it is retained in the ESG Leaders Index even though it may result in a cumulative sector coverage significantly higher compared to the 50% target. This is aimed at ensuring better index stability and lower turnover;
- If the marginal company is a non-index constituent, then the marginal company will be included in the ESG Leaders Index only if the cumulative sector coverage with the marginal company is closer to 50% compared to the cumulative sector coverage without the marginal company;
- The minimum sector coverage is set to 45%;
- The marginal company will be added to the ESG Leaders Index if required to achieve cumulative sector coverage of less than 45%; and
- Securities which are ineligible will not be added even if the cumulative sector coverage after addition of all eligible securities is below 50%.

Maintaining the MSCI ESG Leaders Indexes. The MSCI ESG Leaders Indexes are reconstituted on an annual basis in May. At each annual reconstitution, the composition of each MSCI ESG Leaders Index is reassessed in order to target 50% free float-adjusted cumulative market capitalization of each sector of the parent index. The MSCI ESG Leaders Indexes are rebalanced in August, November and February.

DISCLAIMERS

THE FUNDS ARE NOT SPONSORED, ENDORSED, SOLD OR PROMOTED BY MSCI INC. (“MSCI”), ANY OF ITS AFFILIATES, ANY OF ITS INFORMATION PROVIDERS OR ANY OTHER THIRD PARTY INVOLVED IN, OR RELATED TO, COMPILING, COMPUTING OR CREATING ANY MSCI INDEX (COLLECTIVELY, THE “MSCI PARTIES”). THE MSCI INDEXES ARE THE EXCLUSIVE PROPERTY OF MSCI. MSCI AND THE MSCI INDEX NAMES ARE SERVICE MARK(S) OF MSCI OR ITS AFFILIATES AND HAVE BEEN LICENSED FOR USE FOR CERTAIN PURPOSES BY THE ADVISER. NONE OF THE MSCI PARTIES MAKES ANY REPRESENTATION OR WARRANTY, EXPRESS OR IMPLIED, TO THE ISSUER OR OWNERS OF THE FUNDS OR ANY OTHER PERSON OR ENTITY REGARDING THE ADVISABILITY OF INVESTING IN FUNDS GENERALLY OR IN A FUND PARTICULARLY OR THE ABILITY OF ANY MSCI INDEX TO TRACK CORRESPONDING STOCK MARKET PERFORMANCE. MSCI OR ITS AFFILIATES ARE THE LICENSORS OF CERTAIN TRADEMARKS, SERVICE MARKS AND TRADE NAMES AND OF THE MSCI INDEXES WHICH ARE DETERMINED, COMPOSED AND CALCULATED BY MSCI WITHOUT REGARD TO THE FUNDS OR THE ISSUER OR OWNERS OF THE FUNDS OR ANY OTHER PERSON OR ENTITY. NONE OF THE MSCI PARTIES HAS ANY OBLIGATION TO TAKE THE NEEDS OF THE ISSUER OR OWNERS OF THE FUNDS OR ANY OTHER PERSON OR ENTITY INTO CONSIDERATION IN DETERMINING, COMPOSING OR CALCULATING THE MSCI INDEXES. NONE OF THE MSCI PARTIES IS RESPONSIBLE FOR OR HAS PARTICIPATED IN THE DETERMINATION OF THE TIMING OF, PRICES AT, OR QUANTITIES OF THE FUNDS TO BE ISSUED OR IN THE DETERMINATION OR CALCULATION OF THE EQUATION BY OR THE CONSIDERATION INTO WHICH THE FUNDS ARE REDEEMABLE. FURTHER, NONE OF THE MSCI PARTIES HAS ANY OBLIGATION OR LIABILITY TO THE ISSUER OR OWNERS OF THE FUNDS OR ANY OTHER PERSON OR ENTITY IN CONNECTION WITH THE ADMINISTRATION, MARKETING OR OFFERING OF THE FUNDS.

ALTHOUGH MSCI SHALL OBTAIN INFORMATION FOR INCLUSION IN OR FOR USE IN THE CALCULATION OF THE MSCI INDEXES FROM SOURCES THAT MSCI CONSIDERS RELIABLE, NONE OF THE MSCI PARTIES WARRANTS OR GUARANTEES THE ORIGINALITY, ACCURACY AND/OR THE COMPLETENESS OF ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. NONE OF THE MSCI PARTIES MAKES ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ISSUER OF THE FUNDS, OWNERS OF THE FUNDS, OR ANY OTHER PERSON OR ENTITY, FROM THE USE OF ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. NONE OF THE MSCI PARTIES SHALL HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS OF OR IN CONNECTION WITH ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. FURTHER, NONE OF THE MSCI PARTIES MAKES ANY EXPRESS OR IMPLIED WARRANTIES OF ANY KIND, AND THE MSCI PARTIES HEREBY EXPRESSLY DISCLAIM ALL WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, WITH RESPECT TO EACH MSCI INDEX AND ANY

DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL ANY OF THE MSCI PARTIES HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, SPECIAL, PUNITIVE, CONSEQUENTIAL OR ANY OTHER DAMAGES (INCLUDING LOST PROFITS) EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

NO PURCHASER, SELLER OR HOLDER OF THIS SECURITY, PRODUCT OR FUND, OR ANY OTHER PERSON OR ENTITY, SHOULD USE OR REFER TO ANY MSCI TRADE NAME, TRADEMARK OR SERVICE MARK TO SPONSOR, ENDORSE, MARKET OR PROMOTE THIS SECURITY WITHOUT FIRST CONTACTING MSCI TO DETERMINE WHETHER MSCI'S PERMISSION IS REQUIRED. UNDER NO CIRCUMSTANCES MAY ANY PERSON OR ENTITY CLAIM ANY AFFILIATION WITH MSCI WITHOUT THE PRIOR WRITTEN PERMISSION OF MSCI.

Shares of the funds are not sponsored, endorsed or promoted by NYSE Arca. NYSE Arca makes no representation or warranty, express or implied, to the owners of the shares of the funds or any member of the public regarding the ability of the funds to track the total return performance of their Underlying Indexes or the ability of the Underlying Indexes to track stock market performance. NYSE Arca is not responsible for, nor has it participated in, the determination of the compilation or the calculation of the Underlying Indexes, nor in the determination of the timing of, prices of, or quantities of shares of the funds to be issued, nor in the determination or calculation of the equation by which the shares are redeemable. NYSE Arca has no obligation or liability to owners of the shares of the funds in connection with the administration, marketing or trading of the shares of the funds.

NYSE Arca does not guarantee the accuracy and/or the completeness of the Underlying Indexes or any data included therein. NYSE Arca makes no warranty, express or implied, as to results to be obtained by the Trust on behalf of the funds as licensee, licensee's customers and counterparties, owners of the shares of the funds, or any other person or entity from the use of the subject index or any data included therein in connection with the rights licensed as described herein or for any other use.
